Purpose Of Telecon

Hydrochemistry data to be provided at the Geochemistry Workshop during the week of 1/9/84.

Text Of Telecon

The NRC staff called to tell us what hydrochemistry data they would like to review during the workshop next week. They said that they currently had log sheets showing ion content of groundwater and computer printout of temperatures and pressures that they obtained over a year ago. They wanted an update of this information.

We said the requested data are almost all in the computer data base now. However, the entries are not completely verified. I suggested that we show them the current data base and show them the type of entry errors that we are finding. I said that we would rather wait until the end of the month when data are completely verified to give the information to them. They said they would review the data and decide whether they could wait until the end of the month to get hard copies of the data.
