 9 entries.
 Oci array has
 lo array has
 12 entries.
Oselect 65 ruelides from the master library on logical 1
0 ruelides from the working library on logical 2
 0 ruclides from the working library on logical 3
 to create the new working Library on Logical 4
 61 resonance calculations have been requested
 O output option for anpx formatted cross section data
Othe storage allocated for this case is 20000 words
 20 array has 65 entries.
30 array has 95 entries.
 40 array has 65 entries.
O general information concerning cross section library
 tape identification number
 number of nuclides on table
 66
 number of neutron energy groups
 27
 first thermal neutron energy group
 Б
 number of censes energy proups
O direct access unit number 9 requires 117 blocks of length 1484 words

Othe absorber will be treated by the norcheim integral method.
Oness of anderator-1 = 15.995
 signs(per absorber atom)= 1.6737141E+04
Onoderator-1 will be treated by the northein integral method.
Oness of moderator-2 = Z37.933
 signs(per absorber aton)= 1.8673432E+04
Oncerator-2 will be treated by the northein integral nethod.
Othis resonance material will be treated as a 2-dimensional object.
Ovolume fraction of lump in cell used to account for spatial self-shielding-1,0000
