**Subject:** Web Review this Weekend

Your names were given to me as those assigned to the web review this weekend. Please note that our review this weekend is limited to the **web only**, not ADAMS. We will resume our ADAMS review next week. I have attached the latest criteria we are using to recommend removal of material. It has changed slightly since this morning, so please use this version. Please e-mail me, by 3:00 Sunday, a consolidated list (separately for each office) of all the material you are recommending for removal. This should include a **brief description of the offensive material**; and the web site address. I will then consolidate the material and results will be provided to the ET on Monday. The web is now available to the NRC staff - you should have received a Network Announcement a few minutes ago. Thank you all for pulling together as a team on such short notice!!! Any questions, call me (301)415-8703, cell 301-266-2527.

**LOWERED THRESHOLD OF CRITERIA FOR WEB/ADAMS REVIEW 10/12/01**

Existing criteria for high-priority removal:

Documents that represent a "consolidation" of plant- specific information that might be used to exploit **site-specific** features including equipment and facility locations.

Additional criteria 10/12/01:

- Locations (even general locations) of the facility site.
- Physical vulnerabilities, potential weaknesses
- Construction details, including wall thicknesses
- Diagrams, schematics, cutaways all but very general layouts of plant designs
- Anything which describes how secure our plants are
- Information which could be used to defeat or breach barriers
- Information is a judgment call
