Purpose Of Telecon

To inquire about information available for Basalt Waste Isolation Project (BWIP) boreholes.

Text Of Telecon

Christine Westbrook, NRC Geology Communicator, called regarding the availability of information for BWIP boreholes (drilled or planned). She was particularly interested in obtaining a map showing the locations of these boreholes, the elevations of land surface at these locations, and knowing which ones were rotary and which ones were core drilled. She was told that a map, at a scale of 1:62,500, was being prepared in response to a recent request from the NRC hydrology staff and that she would be provided with a copy of that map as soon as it was available. She was also requested to examine the copy of Data Package 035 which had been forwarded to the NRC to determine if some of her questions could be answered by that data package. I told her we would determine other available sources of information and that I would contact her the following week to determine if she had further information needs.

*ACTION: P. E. Long: Obtain copy of latest revision of Data Package 035.

S. M. Price: Call Christine Westbrook by December 16, 1983 to determine if additional information needs have been identified.
