Purpose Of Telecon

Subjects for discussion during the NRC's (Hydrology Group) visit to Richland the week of January 9, 1984.

Text Of Telecon

Bob Wright asked if it was appropriate at this time to informally discuss the BWIP's current hydrologic testing strategy. He had the feeling that some changes in the BWIP's position concerning this subject may have occurred since the NRC workshop last summer, when the testing strategy was last discussed. He was told that this was probably an appropriate subject to discuss during their visit and that BWIP would consider the request and inform him of the decision on December 21, 1983.

Mr. Wright also asked about deviation drilling performed by the BWIP. He was under the impression that such drilling was being done at RRL-2. He was told that such drilling had been undertaken at borehole DC-16C and that studies of the core were now under way. It was suggested that initial results could be discussed with NRC at the January 9, 1984, meeting.

ACTION: G. S. Hunt call Bob Wright prior to December 22, 1983, and inform him of decision regarding testing strategy discussion.
