Purpose Of Telecon

I returned Raj's phone call. His telecon message indicated that he wanted to know if our NWRB CSDD had been released.

Text Of Telecon

I told Raj that the NWRB CSDD had been released and that NRC had copies. He asked if it had been updated. I stated that it had not, but that we were starting now on a study to update the underground portion of the CSDD and that it would be available for input to the SCP and for NRC review after June 30, 1984. I told him the conceptual design update would contain no information on surface facility design.

I also told Raj that it was my understanding that DOE-RL had communicated with Bob Wright to recommend that the January Repository Design Workshop be delayed to March so that NRC could review some aspects of our underground design planning and status, and that I thought that agreement has been reached on this point. It was Raj's understanding that we would still have a workshop in January to review results of our ongoing engineering studies and geomechanics data. I told Raj that at present we are doing no work to prepare for this January workshop. The need for the January workshop needs to be resolved between DOE-RL and NRC.
