**SUMMARY**  
 As agreed on Thursday, October 16, 1986, Paul Hildenbrand and I contacted BWIP to convene a conference call to discuss the status of the BWIP Hydrology Data Review. DOE-RL representatives included Jim Mecca, Dave Dahlem, and K. Michael Thompson. Contrary to the outcome of the discussion between M. Weber and J. Mecca on October 16, DOE-RL now considers that it can support a hydrology data review during December. DOE will assign staff who are not presently working on developing the hydrology testing strategy to support the data review. NRC indicated that the data review will not involve interpretive discussions of the data, but questions may be asked to clarify the data reviewed by the NRC team. As an alternative, NRC offered to transmit these clarification questions to DOE within 2 weeks after the data review. NRC indicated its preference to conduct the data review during the first week of December (December 1-5). Pending confirmation of these dates by DOE, NRC will transmit a letter of request for the data review to DOE. NRC also invited DOE to participate in a pre-data review visit to an NRC-RES field site at Creston, Washington. DOE indicated that it will

confirm the dates for the data review by October 22, 1986.
