SUBJECT

Status report of outstanding items & of on-going BWIP Site-Related

Activities-BWIP.

SUMMARY

Several requests for information of BWIP had not yet been transmitted to NRC by DOE (reference requests in L. Olson - J. Linehan letter of 27 March 1986). Three data bits (#2-RRR-specific raw seismological data from Hanford network; #7-data set maps; dynamic and ambient temperature logs from BWIP boreholes) have been compiled by RHO and will be transmitted shortly by Art Lassila of DOE. This completes the NRC's requests of DOE for information as listed in the above Linehan-Olson letter.

Additional discussion items included the following impact of the QA Stop Work Order on BWIP activities: (1) all office-field activities (with the exception of seismic network monitoring) have ceased; (2) no report editing or release of reports "in the pipeline" will take place until resolution of the QA matter; (3) DOE/RHO is currently assessing all their activities in order to determine what can/can not be worked on; (4) DOE questions the ability of NRC to conduct Appendix 7 visits until the QA matter is resolved.

The State of Washington's critical comments of DOE's hydrocarbon potential report will probably be addressed in the SCP.

State of Washington will be notified of the availability of the data set maps following NRC's review of the same.
