SUBJECT STATUS REPORT ON BWIP SITE ACTIVITIES

SUMMARY I returned Mr. Thompson's call to discuss the status of BWIP site activities. Mr. Thompson inquired about the status of the summary meeting notes from the December 1985 NRC-DOE Meeting on BWIP Hydrology. The notes had been forwarded to NRC for J. Linehan's signature. I informed Mr. Thompson that, to the best of my knowledge, the notes had been returned to DOE-RL in January 1986 (I subsequently confirmed this and informed Mr. Thompson that the notes were forwarded back to DOE on January 22, 1986). Mr. Thompson then informed me of the status of site activities, as follows (as of 2/7/86):

1. DC-18 had been drilled down to the top of the Wanapum Basalt.
2. DC-23GR had been drilled down to the top of basalt through the unconfined aquifer.
3. DOE was proceeding to core RRL-17 in the Cohasset flow top; coring had been hampered at RRL-17 because of rig maintenance problems.

I thanked Mr. Thompson for the update and indicated that I would inquire about the summary meeting notes in NRC.

ACTION REQUIRED Inquire about the status of summary meeting notes.

NAME OF PERSON DOCUMENTING CONVERSATION: Michael F. Weber
