(Return to W.L., S23-33)

Attached for your review, and for review by NMSS management, is draft NUREG 0960, "Draft Site Characterization Analysis" for the Basalt Waste Isolation Project.

As you know, we are working under a stringent production schedule, in order to provide DOE with early guidance on the BWIP site characterization program. This schedule calls for the draft NUREG to be delivered to the printers on Monday, March 14, 1983.

With this in mind, I would like to have in my hands, by COB March 8, any comments which you wish to have incorporated in the document.

Responsibility for the technical content of this document rests with myself and, more importantly, the BWIP review coordinators. The areas of technical responsibility are shown below:
