Subject: Re: Web review material

I have a problem with pulling this one. It is the latest info re spent fuel pool risks/consequences--but deals with a hypothetical generic design. Although it would make the reader aware that serious releases can occur under special circumstances at a spent fuel storage location, it is not a site-specific analysis.

I know we said we would not consider information that wasn't plant-specific to be pulled, but I received this suggestion from several NRC employees, who maintain that it addresses aircraft crashes in sufficient detail to be of potential use to adversaries. Please check it out and let me know your thoughts asap. Thanks.
