| SUBJECT | | MINERAL LEASING - STATUS OF IN THE VICINITY OF THE WPPSS REACTORS AT THE HANFORD SITE & CERT MAP | | | |
| SUMMARY | | WM-1112 P. Justus J. Trapp P. Hildenbrand K. McConnell | | | |

PHYLLIS SOBEL (GEOPHYSICIST ASSIGNED TO THE WMP-2 REACTOR) REQUESTED A BRIEFING ON THE MINERAL RIGHTS SITUATION AS CONTAINED IN THE NRC'S WMP-2 SAFETY EVALUATION REPORT.

• Conveyed to Phyllis Sobel

N. No mention/analysis, from the geologic perspective, was included in either the WMP-2 or the Skagit/Hanford SERP. This was not done for several reasons:

- (1) All lands having been leased from DOE, it appeared that DOE should have retained control of the mineral rights of all lands within the Hanford Site.
- (2) There was no gas/oil commercial production in the Columbia Plateau.
- (3) From a geologic perspective, hydrocarbon production would pose no hazard (subsidence/collapse) for oil/gas extraction from the underlying sediments.

SUBJECT

MILNER LEADLINE - STATUS OF IN THE VICINITY OF THE WPPS REACTORS AT THE HANFORD SITE & CERT MAP

SUMMARY

(A) An accident analysis addressing the effects of an explosion, fire, gas cloud originating from a well located on the edge of the feasible lands should most likely be conducted by WPPS WPPSS has probably already done this.

(5) WPPS may wish to assess (CERT Report) the presence/absence of faults underlying the Rattlesnake Hills based on the Standard Oil of California (1957) well logs and the significance of faults, associated with the Rattlesnake Hills Fault projecting closer to the WPP-2 unit than the Rattlesnake Hills Fault.
