

MEMORANDUM

March 7, 1989

TO: Conflict of Interest Committee Chairman

FROM: John P. Hageman, Manager *JPH*  
Repository/MRS Design, Construction, and Operations

SUBJECT: Element Cover Letter/Memo to the COI Management Committee

Attached is the completed Center Questionnaire for Preliminary Evaluation of Potential Conflict of Interest form and the signed letter from Mark Mack attesting to the belief that he is free from COI.

The proposed work assignment for this individual includes the following:

Work will primarily be on technical review and analysis of HLW repository design, construction, and operation. Duties will include technical review and comment on DOE activities, including the SCP, NRC, EPA, et al. regulations for HLW disposal related to facility design, license application, and site characterization. Other responsibilities will include providing technical advice and comments on engineering aspects of the proposed HLW facility and site.

The impact of not using Mark Mack would be that work in the RDCO Element would be delayed. An alternative would include finding and hiring or contracting an alternative resource. After review of Mr. Mack's experience and resume, I have found that he is capable of performing the required activities.
