**Subject:** Gamma Metrics and Mailing Address

I have spoken with Robbie Bryant from Thermo Electron Gamma Metrics concerning the model number in question. He stated it is an 1812C model as all my documents state and that they do not make a 2000 model. However, prior to Y2K they installed 2000 software on the 1812C model. This was the only explanation that he had as to why the license would state a 2000 model.

The mailing address needs to be as follows:

Pinnacle Mining Co.

P.O. Box 338

Pineville, WV 24874

Att: Earl R. Farmer, RSO

**Subject:** Model 2000 Gamma Metrics Unit

I spoke with Robbie Bryant and David Milam from Thermo Gamma Metrics concerning the information on the 1812C unit. I directed Robbie to the NRC web site and told him to find the sealed source and device registry for the Gamma Metrics Unit that we have on site. He looked at all the information on the model 2000 listed and stated it was identical to the 1812C that we possess. He spoke with one of their reps in California and they said at the time the unit was registered it was registered as a 2000 model. The registration # is CA305D1015. I truly hope this new information will resolve the confusion of the model number.

Thank You, Earl Farmer
