SUBJECT: Installation of ISATIS V.3.1.3 Acquired Software
DATE: 10/26/1998

The ISATIS software package (V.3.1.3) was supplied on a CD-ROM as a executable file. The version of the software acquired was designed to run on a SUN workstation running either the SunOS 4.1.3 (and higher) or Solaris 2.5 (and higher) operating systems. Versions of the software may also be acquired for execution under Windows NT 4.0.

The software was installed on the Sun workstation HORNET which is currently running version 5.5.1 of the SunOS. Due to the licensing agreement, the software can only be executed by a single user at any one instant on this machine.

An installation test was performed on the software. This test involved reproducing the results of an example exercise (Mining Case Study) contained in the distribution manuals. As shown in the attached documentation, the results contained in the exercise were accurately reproduced. Hence, the software appears to have been successfully installed.

It is worth noting that the supplied documentation appears to contain some typographical errors and mis-labels. Where these have been encountered corrections have been made. In addition, the supplied documentation may be difficult to read in some areas due largely to poor French to English translation.
