RECEIVED

We would like to address the situation of Louisiana Energy Services (LES) becoming a part of our community, Eunice, New Mexico, and their plans to build the Nuclear Enrichment Facility here. This is a wonderful opportunity for Eunice and NEF to become partners.

The NEF will be bringing a wonderful and safe company to our area that will bring jobs and economic development unparalleled in Eunice. Having lived in an oil and gas producing area most of our lives, we are aware of the technology that is required to move forward with this industry.

NEF will be a tremendous addition to our technology and we feel this area can offer great benefits to LES. The location of the plant is in an area that has already been certified to have no water tables to speak of, there is no oil or gas production to interfere with, and it is geographically a wonderful place to build any plant.

The United States needs to take a cue from the over 100 nuclear plants throughout our country and realize that the NEF plant will be able to compete with the service and cost of enriched uranium being provided by overseas companies.

Eunice, New Mexico, has embraced NEF for the simple reason that we know and understand the benefits on both sides of the coin. Many people will be offered new jobs and the payroll will come back to help the economy of our town.

NEF will be wonderful for us and Eunice will be wonderful for NEF.

You can't find a better matchup anywhere in the United States.

Thank you,
