Subject: LP Turbine Disc Missile Evaluation

Below is the result of your feedback form. It was submitted by

Bill Cox (bill.cox@siemens.com) on Wednesday, March 17, 2004 at 16:34:00

comments: The Westinghouse Steam Turbine Generator Division of Westinghouse Electric Corporation's Power Generation Business Unit submitted reports WSTG-1-P "Estimating the Probability of Steam Turbine Disc Rupture From Stress Corrosion Cracking" and MSTG-1-G "Criteria for Low Pressure Nuclear Turbine Disc Inspection". These proprietary reports were sent to the NRC in order to get acceptance of our evaluation methodology of LP turbine disc indication indications in support of the Site Missile Analysis.

I understand that WesDyne, formerly owned by Westinghouse Electric Corporation's Energy Services Business Unit and now owned by Westinghouse Electric Company of British Nuclear Fuel, now claims to have an evaluation methodology.

I have assumed that Wesdyne, Westinghouse Electric Company, or British Nuclear Fuel published similar reports on the NRC website since Siemens Westinghouse now owns the rights to the methodology described in the above reports. However, I am unable to find the non-proprietary version of their reports describing their evaluation methodology on your Website.

Can you please direct me to WesDyne's non-proprietary report on your website?

Would WesDyne or Westinghouse Electric Company have access to the proprietary versions of the above reports, via the NRC?

Is there a requirement that the NRC must review the evaluation methodology?
