#### TECHNICAL AND MANAGEMENT SUPPORT SERVICES

FOR THE

YUCCA MOUNTAIN SITE CHARACTERIZATION PROJECT

IMPLEMENTATION PLAN
FOR
DEVELOPING AND IMPLEMENTING A METHOD
FOR EARLY EVALUATION OF SITE SUITABILITY

REVISION 3

OCTOBER 1991

#### IMPLEMENTATION PLAN FOR DEVELOPING AND IMPLEMENTING A METHOD FOR EARLY EVALUATION OF SITE SUITABILITY

#### PREPARED BY TECHNICAL AND MANAGEMENT SUPPORT SERVICES (TEMSS)

TEMSS Task Manager:

TEMSS Quality Assurance:

TEMSS Project Manager:

#### APPROVED BY YUCCA MOUNTAIN SITE CHARACTERIZATION PROJECT OFFICE

Analysis and Verification Division, Manager

Regulatory and Site Evaluation Division, Acting Manager

Office of Geologic Disposal Associate Director:

han J. Brodoum

#### EXECUTIVE I MMARS

-<u>;</u>

This implementation Plan, prepared to the total the Total Televisian Gerna, Associate Director of the Strine to New 4: 1994 Tally 1997 to the Nelson, TaMSS Profest Manager, provides the dougle, entering, and Control needed to sevelop and implement a method for early evaluation of the suitability. The methodology level red will be taken to the requirements and quidance provides in the Naclear Wasters (1997) Act of White to Cotto, as writhers by the Nuclear Waste Felicy Amenuments Auto in 1987 . The NAIA, an important by 10 CFK Part 9e0, provides the deneral ofing an addition for the remendation of sites for ge logic repositioner but the map call to unserve. radicactive waste and spent national ton. An Provincia of A content (PA) was conducted (DOE, 1986) in which the qualifying and Highward, by conditions of these quitelines were evaluated. Available of small or was used to support findings that the first Montain of Washing Disputations. and that all qualifying conditions were men. These is tungs, tested "s wet level findings." were required to continue are in other for the date to proceed into the site characterization thase. "Tringer formings, farmed "higher level findings," are required for the site to the recommendation repository development.

In 1989, the V.O. Secretary of Energy states that early site characterization should be focused in information needed to evaluate outs surface. We Because the general siting guidelines do not provide a specific methodically for these evaluations, which are to occur reture or model, not like that acceterization, this Early Site Sultability mighation (ESCE) effort is needed to develop a methodology and then to conduct an initial evaluation.

The general approach for this effort involves the following matter that it

- a A core team will evaluate the qualifying and disqualitying function of 10 CFR Part 960 to determine it information available active the FA suggests that a new unsuitablicity suitability finding should be made if such a finding cannot be made, the team will identify what information and analyses are needed to support which a limiting.
- o An informal briefing package rescribing the general methodology to evaluation of site suitability will be provided to the GCHWM brief to in May 1991.
- Based on this methodicity, intornation will be assemble "and work or evaluations of the guidelines to determine it a new funding in appropriate. These individual quideline evaluations will reassembled into an ESSE Report.
- 5. This report will undergo 7.8 to the way and a reer termew.
- . After resolution of seriew connects, the first FIIs hoped will be transmitted to the CRWM wire the constant  $\mathcal{O}^{\rm SM}$

Thus implementation blank about the responsible order value of a positive factor and the part of part of a configuration, in a configuration of x

milestones, the approach to be followed, and deliverables. Section 2.6 provides the detail on how this effort will be (1) planned, including the scope, schedule and funding baseline and relationship within the Yucca Mountain Site Characterization Project (Section 2.1, Planning); (2) monitored (Section 2.2, Monitoring); and controlled (Section 2.3, Change Control). Section 3.0 provides the detail of the work structure. Section 4.0 provides the detail of the approach to be followed in developing the methodology and conducting the initial evaluation (Section 4.1, ESSE Approach) and the deliverables (Section 4.2, Deliverables).

This Implementation Plan provides the chope, schedule, and funding needed to develop and implement a method for early evaluable to the suitability. The following is the sequence it events which requires in the preparation of this implementation plant

• :

. .

. .

- 1. On December 24, 1990, John W. Bartlett, Directir of the Office of Civilian Radioactive Waste Management (GCRWM), trunsmitted guidance to Carl P. Gertz, Associate Director of the Office of Geologic Disposal (OGD), to develop an - 32 Flan for this effort.
- The AGD Plan for Developing and Implementing a Method for Early Evaluation of Site Suitability, YMF-91/1, was prepared and approved.
- 3. On January 23, 1991, Darl F. Wertz transmitted quitance to John H. Welson, TAMSS Project Manager, to develop a TAMSS Implementation Plan, based on the OGD Plan, for this effort.
- 4. This TAMSS implementation Flan fulfills the above Carl F. Jertz request.

#### 1.1 BACKGROUND

Pursuant to the Nuclear Waste Policy Act (NWPA) of 1982, the U.S. Department of Energy (DOE) developed general siting quidelines (10 CFR Part 960) for the recommendation of sites for geologic repositories for the disposal of high-level radioactive waste and spent nuclear fuel. According to the summary provided in 10 CFR Part 960, "the quidelines are compatible with the regulations issued by the Nuclear Regulatory Commission (NRC) in 10 CFR Part 60 and those proposed by the Environmental Protection Agency in 40 CFR Part 191." The guidelines were designed to be used in the various steps of the siting process, as required by the NWPA. The steps in the NWPA included nomination and recommendation of sites to be characterized, comparison of characterized sites, and recommendation of a site for repository development from among those that were characterized. With the passage of the Nuclear Waste Policy Amendments Act in 1987, the Yucca Mountain site in Nevada was selected as the only site to be characterized, thus eliminating the need to compare among sites. However, elimination of the need to compare sites did not relieve the DOE of responsibilities for evaluating the suitability of the Yucca Mountain site for repository development.

In his 1989 report to Congress, the Secretary of Energy annuances that "the DOE has decided to focus on surface-based testing aimed specifically in evaluating whether the (Yucca Mountain) site has any features that would indicate that it is not suitable as a parential repusitory site....[7]here investigations will provide early information about the cuitability of the

from the State of Nevada and the Edison Floring Institute, that I service investigation activities focus on putentially asverse countries and that effort be made to evaluate key suitability in the earth of the or occument DOE siting guidelines provide general tast to all an approach that it would use to determine the suitability of a site. The to written to the world, provide detailed guidance for those earth site evaluations, into along the provide detailed guidance for those earth site evaluations, into along the of the evidence supports a finding by the DIF that it quality if the first of the exist or the qualifying conditions of any type of the first activities to detail the disappearing a first of the making these contents of the early site suitability evaluations.

#### 1 1 IVEPAIL : NE

As indicated in the letter from Carli. Gertz requesting to TSMTC Implementation Plan, the first goal of the Early Dite Cultability Position (ESSE) effort is for the CCPWM Director to present the general method for early site suitability evaluations in a public forum in min-1941. Allegant goal establishes a milestone for completion of the first phase of the early suitability evaluation by January 1992. Therefore, the doors of the suitability evaluations and implementation of this method for early often suitability evaluations and implementation of this method for early often of the evaluation.

The extent of application of the method to quantifying and disquaritying conditions will be limited by the use of existing data and information. Where evaluations cannot be performed due to insufficient information, a process (as described in Section 4.1.3.1) will be developed to provide the needed information.

#### 1.3 PURPOSE DE IMPLEMENTATION FLAN

The purpose of this implementation Plan is to lientity the tolliwing:

- 1. The Yucca Mountain Site Characterization Project (YMP) participant organization responsible for this effort.
- The responsibilities of, and organization interfaces between, the YMP participant organizations involved in this effort.
- The quality assurance and other requirements appointed to this
  effort.
- 4. The proposed schedule for uniqueties and sumpleties of this world to meet the January 19ax molections and other molections.
- 5. The approach to be tollowed in similarith a effort.
- The wire intepo to be following.
  - . The products of this off of

#### 2.0 PLAN MANAGEMENT AND IMPLEMENTATION

This section describes the overall management, coordination, and implementation process for performing the tasks identified in this plan.

Section 2.1, Planning, contains the elements of the ESSE effort that will constitute the ESSE scope, schedule, and burget baseline. Section 2.2, Monitoring, details how Tames will monitor the progress of this effort to the baseline, including identification of variances analysis of the variances and options for resolution. Section 2.3, Change Control, provides detail on how resolution of variances will be authorized, implemented, documented, and controlled.

#### 2.1 PLANNING

The elements of this section constitute the ESSE buseline. This baseline will allow identification of impacts it conducting the ESSE effort relative to ongoing OSD programs and will also be used to monitor progress during performance of the ESSE effort.

#### 2.1.1 ESSE SCOPE

#### 2.1.1.1 Work Structure

The scope of the ESSE effort is described in Section 4.0, ESSE Approach and Deliverables.

This effort falls within Project Work Breakdown Structure element 1.2.5.2, Licensing.

#### 2.1.1.2 Deliverables

The deliverables to be produced for specific activities are identified in Section 4.0, ESSE Approach and Deliverables.

#### 2.1.2 ESSE SCHEDULE

#### 2.1.2.1 Logic of Activities

Appendix A contains the time-phased logic that represents the scupe an described in Section 4.0, ESSE Approach and Deliverables.

#### 2.1.2.2 Milestones

| Description   | Date     |
|---|----------|
| Submit Informal Briefing Material on the ESSE<br>Hethod to CCRWM Director | 05/01/91 |
| Submit ESSE Report (for review)   | 07/29/91 |
| Complete Peer Review of the ESSE Report                                   | 12/10/91 |
| Transmit Final ESSE Report to OCRWM Director                              | 01/31/92 |

#### 2.1.3 FUNDING AND RESOURCE ESTIMATES

#### 2.1.3.1 TEMSS Funding and Resource Estimates

TEMSS funding and resource estimates are transmitted separately to the Yucca Mountain Site Characterization Project (YMPO). A summary estimate of TEMSS manpower requirements is as follows:

February to mid-July 1991 - 6.2 Staff Members\*
Mid-July to January 1992 - 5.0 Staff Members

#### 2.1.3.2 Participant Resource Estimates

The following is an estimate of the manpower to be provided by the various YMP participants to perform the scope of work contained in the approved Interface Memoranda of Understanding (IMOU) with each participant. The IMOU contain guidance for the participant to estimate the resources needed to perform the noted scope, review the potential impacts of using these resources, and initiate change control actions as appropriate. These estimates include the effort defined in Section 2.1.5.2 and also the support to other lead participants.

| . •                         | Feb. to Mid-July '91   | Mid-July to        |  |  |  |  |  |
|-----------------------------|------------------------|--------------------|--|--|--|--|--|
| LANL                        | 3.25 Staff Members*    | 1.25 Staff Members |  |  |  |  |  |
| LLNL                        | 2.25 Staff Members     | 1.00 Staff Members |  |  |  |  |  |
| SNL                         | 3.50 Staff Members     | 1.25 Staff Members |  |  |  |  |  |
| USGS                        | 5.25 Staff Members     | 7.75 Staff Members |  |  |  |  |  |
| Weston Techni<br>Associates | cal 2.90 Staff Members | 1.00 Staff Members |  |  |  |  |  |

The term Staff Member can refer to a mix of personnel whose availability may add to the number shown.

Other organizations may be identified for involvement during the effort. Formal change control actions will be used at those times.

#### 2.1.4 QUALITY ASSURANCE AND REQUIREMENTS

#### 2.1.4.1 Grading Report TESS-001

Quality Assurance requirements for this effort are established by Grading Report TESS-001 (see Appendix C). These requirements will ensure that documentation preparation, technical or peer review, document control, records, audits, corrective actions, training, and qualification of staff are performed in accordance with procedures established for each participant (i.e. TEMSS, SNL, LANL, LLNL, USGS, and Weston) under its particular quality assurance program, as clarified and detailed in revision 1 to Grading Report TESS-001 (Appendix C). Work performed at a participant organization at the direction of the ESSE Core Team will be in accordance with the participant's particular QA program. Activities completed by the ESSE Core Team will be conducted in compliance with the TEMSS QA Program. All references and data used to support the evaluation will be included in the formal records package and will be verified.

#### 2.1.4.2 Methodology and Evaluation Requirements

The basis for the site suitability evaluations will be the siting guidelines of 10 CFR Part 960. These guidelines provide the general factors by which the DOE will judge the suitability of a rite. The disqualifying and qualifying conditions of the guidelines define the site features and conditions to be evaluated in determining suitability or unsuitability. According to the guidelines, the site must be disqualified if the evidence supports a finding by the DOE that any of the disqualifying conditions exists, or if any of the qualifying conditions cannot be met.

The early evaluations of site suitability will address the disqualifying and qualifying conditions by considering the following:

- o Factors related to potentially unacceptable performance of the repository system
- o Site conditions or features that are potentially unacceptable, or which suggest that potentially unacceptable changes in conditions might be caused by future tectonic, volcanic, or extreme climatic change in the next 10,000 years
- Significant uncertainties that are unlikely to be removed with any reasonable testing program
- Site conditions that require faulturies or designs which are regular reasonably available technology

Key elements of these considerations will be the kind and level of uncertainties and the significance of these uncertainties relative to the qualifying and disqualifying conditions. It is done these evaluations, it will be necessary to have adequate unperchaption if the intermation took is

already available and to specify the kind of additional information that is needed to reduce these uncertainties.

#### 2.1.4.3 <u>Implementation Plan Requirements</u>

This Implementation Plan contains the scope of and complies with the requirements and guidance (1) contained in the OGD Plan for Developing and Implementing a Method for Early Evaluation of Site Suitability, YMP-91/1; and (2) provided by the Scope of Work attached to the Carl P. Gertz to John H. Nelson letter, dated January 23, 1991. This plan must be developed and approved in accordance with the requirements of T&MSS SP 1.35, Preparation, Review, and Approval of Non-Technical Documents.

#### 2.1.4.4 Requirements for Implementation of This Plan

Implementation of this plan will occur when YMPO approves it.

Performance of the tasks and activities contained in this plan will be in accordance with the requirements of the Quality Assurance Grading Report TESS-001, Rev. No. 1 (Appendix C). Activities completed by the ESSE Core Team will be conducted in compliance with the T&MSS QA program, as clarified and detailed in revision 1 to the Grading Report TESS-001 (Appendix C).

Figure 2-1 is a matrix of training requirements for all personnel associated with this plan. As shown on the matrix, the ESSE Task Manager is responsible for the overall management requirements of this effort. The ESSE Core Team is composed of members from T&MSS, SNL, LANL, LLNL, USGS, Weston, and other contractor personnel. Core Team members constitute the voting body of the ESSE effort. Alternate Core Team members have been appointed with voting authority only in the absence of the Core Team member. As designated on Figure 2, Participant Staff refers to all personnel in support of the ESSE Task Manager and the ESSE Core Team members.

Decision analysts (consultants) employed on the ESSE effort do not generate, manipulate, modify or output design data. This function is to assist individuals who may generate, manipulate, modify or output such information in the application of decision analysis techniques. As such, it is only required that they have sufficient credentials and related experience in the decision analysis discipline to be able to coach or facilitate core team members and their function is critical to the ESSE team product from this later perspective only. Decision analysts will perform their function according to the procedures indicated on Figure 2-1.

Involvement of YMP participants will be accomplished through the use of IMOU, per AP-5.19Q, Interface Control.

#### 2.1.5 MANAGEMENT

The Associate Director of the CGD was given responsibility for conducting the task covered by this plan. Within the CGD, management of the task was delegated to and shared by the Directors of the Analysis and Verification Division Office, CGL, and the Regulatory and Site Evaluation Division (RSED), YMPO. Management applicance will be provided to the responsible Directors by the Directors of the Project and Operations Control Division, YMPO, and the Engineering and Development Division, YMFO, and the

<sup>&</sup>lt;sup>1</sup> As appropriate.

ESSETRNG 063/7-18-

 $<sup>^{2}</sup>$  For Participant staff members who participate in review and comment resolution of T&MSS products.

Special Assistant for Institutional Affairs, YMPO. The responsibility for conducting this plan is assigned to the T&MSS contractor in accordance with the letter of January 23, 1991, Carl P. Gertz to John H. Meison, T&MSS Project Manager.

#### 2.1.5.1 Organization

• ...

The YMP participants will support the ESSE effort as shown in the Organization Structure, Appendix B. This organizational approach will allow interactive participant coverage of the activities required by each of the tasks described in this plan.

At various progress points, T&MSS may determine the need for additional technical support, either from OGD participants or from entities external to the OGD. As noted in Section 2.1.5.2, T&MSS will make appropriate selection and obtain agreements through use of IMOU.

#### 2.1.5.2 Responsibilities

The responsibilities of the various organizations involved in the ESSE effort are as follows:

The YMPO is responsible for work authorization, budget allocation, review and acceptance of the implementation plan, review and acceptance of the effort deliverables, and acceptance of the final report. YMPO responsibilities such as resource and training requirements, work conduct, etc., are not covered in this plan.

TEMSS will be responsible for overall technical integration, monitoring, and coordination of the activities of the YMP participants involved in this effort. Included is the selection of the core team and other technical support. TEMSS will monitor the tasks and report their progress to the YMPO at periodic meetings.

Note: The following paragraphs provide detail on which participants have lead responsibility. The lead organizations are expected to request the support of other YMP participants as necessary to successfully complete the activities described in this plan.

On a technical level, T&MSS is responsible for providing the ESSE effort with lead technical expertise and input relative to the following guidelines of 10 CFR 960:

Postclosure 360.4-2-8 Human Interference

Preclosure
System Guideline for Preclosure Radiological Safety
960.5-1(a)(I) System Guideline for Preclosure Radiological Safety

Preclosure Radiological Safety

960.5-2-1 Population Density and Distribution

960.5-2-2 Site Ownership and Control

960.5-2-3 Meteorology

960.5-2-4 Offsite Installations and Operations

System Guideline for Environment, Socioeconomics, and Transportation 960.5-1(a)(2) System Guideline for Environment, Socioeconomics, and Transportation

Environment, Socioeconomics, and Transportation

960.5-2-5 Environmental Quality

960.5-2-6 Socioeconomic Impacts

960.5-2-7 Transportation

Sandia National Laboratories (SNL) is responsible for providing the ESSE effort with lead technical expertise and input relative to the following quidelines of 10 CFR Part 960:

Postclosure

960.4-2-1 Geohydrology

Preclosure

Ease and Cost of Siting, Construction, Operation, and Closure 960.5-2-10 Hydrology 960.5-2-11 Tectonics

Los Alamos National Laboratory (LANL) is responsible for providing the ESSE effort with lead technical expertise and input relative to the following quidelines of 10 CFR Part 360:

Postclosure

960.4+2-2 Geochemistry 960.4-2.6 Dissolution

Preclosure

Ease and Cost of Siting, Construction, Operation, and Closure 960.5-2-9 Rock Characteristics

Lawrence Livermore National Laboratory (LLNL) is responsible for providing the ESSE effort with lead technical expertise and input relative to the following guideline of 10 CFR Part 960:

Postclosure

960.4-2-3 Rock Characteristics

The United States Geological Survey (USGS) is responsible for providing the ESSE effort with lead technical empertise and imput relative to the following guidelines of 17 CFF Fart 466:

Postclosure

960,4+2-4 Climatic charge:

960.4-2-5 Erosion

- 960,4-2-7 Septimbles

Preclosure

Ease and Cost of Siting, Construction, Operation, and Closure 960.5-2-8 Surface Characteristics

960.5-2-8 Surface Characteristics

Weston Technical Associates is responsible for providing the ESSE effort with lead technical expertise and input relative to the following guidelines of 10 CFR Part 960:

Postclosure

System Guideline for Total System Performance 960.4-1 System Guideline for Total System Performance

Preclosure

System Guideline for Ease and Cost of Siting, Construction, Operation and Closure

960.5-1 System Guideline for Ease and Cost of Siting, Construction, Operation and Closure

## 2.1.5.3 Organizational Interfaces

An IMOU will be developed and approved with each participant. The IMOU will contain the services, deliverables, schedules, and milestones to be provided by the participant and the quality assurance requirements under which the participant will manage its efforts. The IMOU content will be consistent with Section 2.1.5.2, Responsibilities, of this Implementation Plan. These IMOUs will be developed and processed per the requirements of AP-5.19Q, Interface Control.

#### 2,1.5.4 Relationship with Other Plans

The testing program to address site suitability concerns and evaluation of the results of testing relative to site suitability are encompassed within the Test and Evaluation Plan (DOE, 1990). This plan defines (1) the general management responsibilities and process for testing and evaluating the Yucca Mountain site in the Exploratory Shaft Facility (ESF) and from the surface, (2) how the tests are identified and prioritized to address program needs, and (3) how data from those tests are evaluated and interpreted. The ESSE effort will be conducted in a manner consistent with the Test and Evaluation Plan, and the results will be evaluated using the process described in the Test and Evaluation Plan.

#### 2.1.5.5 Relationship with Other Efforts

Information developed by other activities will be utilized in the ESSE effort. Other activities that are closely related include the following:

ESF Alternative Study
Calico Hills Risk/Benefit Analysis
Test Prioritization Task
Golder Associates Incorporated (GAI) performance assessment effort
Electric Power Pesearch Institute (EPRI) performance assessment effort

Phase II of the Test Prioritization Task has been deferred, and staff have been reassigned to the ESSE.

The ESSE effort will be coordinated with the YMP Planning and Control System (PACSA) and the TEMSS Contract Management Control System (CMCS) regarding ESSE planning, monitoring, and control.

#### 2.2 MONITORING

As indicated, Section 2.1, Planning, provided the baseline scope, schedule, and budget elements for the ESSE effort. This section will detail how T&MSS will monitor progress, including variances.

#### 2.2.1 PERIODIC REVIEWS

of activities. These reviews will occur approximately biweekly (associated with core team meetings or teleconference calls) and will involve status of the technical scope being accomplished by participants and status of the schedule for these activities. The reviews will also comply with the requirements noted in Section 2.1.4.4, Requirements for Implementation of this Plan (relative to baseline monitoring).

The progress reviews will be provided to the T&MSS Project Manager.

#### 2.2.2 PERIODIC STATUS TO DOE

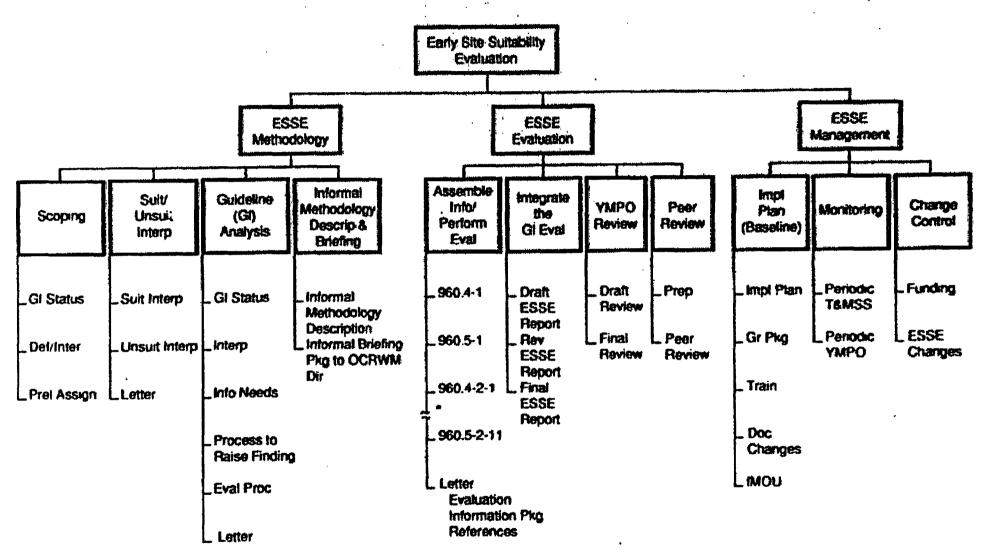

TEMSS will provide a periodic status briefing (targeted at monthly) to the YMPO. The briefing will involve a summary of the periodic reviews (Section 2.2.1) of scope, schedule, and budget progress. Included will be information generated during the PACS/CMCS variance analysis cycle.

#### 2.3 CHANGE CONTROL

For variances identified by monitoring efforts, as indicated in Section 2.2, implementation of any proposed resolutions will involve approved change control actions. These actions will occur in compliance with the requirements noted in Section 2.1.4.4.

#### 3.0 ESSE WORK STRUCTURE

Figure 3-1 provides a work structure for the major activities to be accomplished during performance of the ESSE. The time-phased logic diagram, as shown in Appendix A, represents this work structure. Section 4.0, ESSE Approach and Deliverables, provides detailed descriptions of the activities involved in each element and the products to be provided from the element.

<sup>\*</sup> Break in diagram indicates 19 intervening guidelines of which 4 are shown.

SSPLAN 053/7-18-91

#### 4.0 ESSE APPROACH AND DELIVERABLES

#### 4.1 ESSE APPROACH

The scoping process described in the OGD Flan to Develop and Implement a Method for Early Evaluation of Site Suitability and guidance from the TMPO/OGD resulted in the scope described in the following sections. This section will describe the elements of the work structure (Figure 3-1) and the deliverables to result from this structure.

#### 4.1.1 ESSE METHODOLOGY

## 4.1.1.1 Scoping

The scoping process involved preliminary selection of a core team of participants to be involved in this effort. Preliminary meetings of the ESSE Core Team (1) reviewed the status of each 10 CFR Part 960 guideline, (2) discussed the definitions and interpretations of the guidelines and the terms suitability/unsuitability, and (3) made preliminary assignments of guideline analysis responsibilities to the ESSE Core Team members.

Appropriate materials from the scoping phase of the activity will become part of the formal records package for this effort.

#### 4.1.1.2 Suitability/Unsuitability Interpretation

ESSE Core Team members will be assigned the task to develop interpretations of suitability and unsuitability. The ESSE Core Team will review these interpretations and reach a consensus interpretation.

#### 4.I.1.3 Guideline Analysis

ESSE Core Team members will be assigned the lead to perform an analysis of specific guidelines of 10 CFR Part 960. Other ESSE Core Team members will be assigned support roles to these specific guideline assignments. These assignments will be documented and approved through the use of IMOU described in Section 2.1.5.3.

The analysis to be performed will consist of the following:

- o Review of the current status of the tindings of the guideline relative to the findings contained in the EA (DOE, 1986). This review will involve the current status of information to be used as the basis for the finding and potentially to support a higher-level finding.
- Develop an interpretation of suitability and unswitability for the specific guideline.
- b Determine data or analyses that rould be used to support the revaluation, if available.

o Establish whether formal expert elicitations or multi-attribute utility analysis will be recommended as part of the evaluation.

Note: Section 4.1.2, below, will detail the actual assembly of information and evaluation performance. However, some information assembly and evaluation will naturally occur as part of the above efforts.

The ESSE Core Team will meet periodically to review the status of these analyses and to develop a consensus on the evaluation results.

# 4.1.1.4 Informal Description of the Methodology and Informal Briefing Material

The ESSE Core Team will develop an informal description of the methodology to be followed to evaluate each of the 10 CFR Fart 960 . guidelines. This description will be based on the results of Section 4.1.1.3.

The core team will develop an informal briefing package of this methodology description. This informal briefing package is provided in response to the OCRWM Director's request indicated in the OGD Plan. This methodology description will be part of the evaluation package described in Section 4.1.2 and will be reviewed per SP 2.3, Review of T&MSS Technical Documents.

#### 4.1.2 ESSE EVALUATION

. ...

. -

#### 4.1.2.1 Assemble Information/Determine Confidence/Perform Evaluation

The evaluation package will be prepared according to SP 2.2, Scientific Investigation Control.

Per the guideline assignments noted in Section 2.1.5.2, the responsible lead and support core team members will assemble the current information relative to the specific guideline. Included will be determinations of the level of confidence in the information being used.

The information assembled will then be evaluated per the methodology described in Section 4.1.1.4. Periodic meetings of the ESSE Core Team will assess the status of efforts being performed to develop consensus on pending results.

The evaluation will include a package of information used and also hard copies of all references.

Note: This will be completion of the evaluation noted to begin in Section 4.1.1.4.

#### 4.1.2.2 Integrate the Guideline Evaluations

The ESSE Core Team will compile an integrated package of the individual guideline evaluations and review this package per SP 2.3, Review of T&MSS Technical Documents. This will constitute the Draft ESSE Report.

The Draft ESSE Report will undergo the following to result in the final package:

- o Review by the YMPO, comment resolution, and revision in preparation for a peer review
- o Peer review, comment resolution, and revision
- o Final review by the YMFO, comment resolution, revision, and approval in preparation for transmittal to the OCRWM Director

#### 4.1.2.3 YMPO Review

As the pre-peer review package will be an initial result of the ESSE effort, a programmatic review under the requirements of YMPO Administrative Procedure AP-1.3, Publications Review and Approval, will be conducted on the ESSE Report prior to the external peer review. Based on this programmatic review, YMPO will approve the release of the ESSE Report for submittal to the peer review.

Subsequent to the Peer Review, a second YMPO review, also in accordance with AP-1.3, will be conducted on the ESSE Report and associated Peer Review Report. The second review will determine actions for YMPO to take, to be tracked per the requirements of YMPO AP-1.14, Disposition of Comments on the Site Characterization Program. The activities associated with actions tracked per AP-1.14 are not part of the scope of this Implementation Plan.

#### 4.1.2.4 Peer Review

The ESSE Core Team will recommend a panel with the expertise required to review the technical content of the ESSE Report relative to the requirements of 10 CFR Part 960. The peer review panel is approved by the ESSE Task Manager under authority delegated by the T&MSS Project Manager, according to SP 1.62, Peer Review Plan. T&MSS will place these experts under subcontract to perform this review. The ESSE Report, which has undergone YMPO management review, will be the basis for the peer review. The ESSE Core Team will meet with the peer review panel periodically to provide background into small any additional information the peer review may request.

The peer review panel will provide the ESSE Core Team with comments on the ESSE Peport. The ESSE Core Team will resolve these attiments and revice the report. This revised report will then undergo TAMSS review prior to transmittal to YMPO for a second review, as described in Deutlen 4.1.2.2.

#### 4.1.3 ESSE MANAGEMENT

Note: Implementation, monitoring, and change control are described in greater detail in Section 2 of this Implementation Flam.

#### 4.1.3.1 Implementation Flan

Tamps will develop this Implementation Plan to form the baseline of the scope, schedule, and funding/budget for performance of the noted scope.

The Implementation Plan will contain the Grading Package (TESS-001), which will contain the requirements for performance of this effort, including training.

Tames will determine the required training, implement this training, verify its completion, and document it.

Tames will develop and obtain approval for documentation required for Tames to perform as the lead YMP participant for the ESSE effort.

TEMSS will develop and obtain approval on IMOU to contain the agreed performance by other YMP participants in the ESSE effort.

#### 4.1.3.2 Monitoring

Tamss will perform periodic monitoring of ESSE progress and provide the results of this statusing to the Tamss Project Manager and to the YMPO.

#### 4.1.3.3 Change Control

Tamss will comply with Tamss and YMPO requirements relative to change control of documentation associated with the ESSE effort.

#### 4.2 DELIVERABLES

Note: Deliverables will be described and detailed relative to the scope sequence described in Section 4.1 above. The following information will also indicate whether the deliverable meets a T&MSS or YMPO milestone.

#### 4.2.1 ESSE METHODOLOGY DELIVERABLES

#### 4.2.1.1 Scoping

Deliverable: N/A

#### 4.2.1.2 Suitability/Unsuitability Interpretation

Deliverable: Letter to the TEMSS Task Manager from responsible ESSE

Core Team member containing consensus interpretation.

Responsible Organization: N'A

Due: 2/18/91

#### 4.2.1.3 Guideline Analysis

Deliverable: Letter to the TSMSS Task Manager from each lead ESSE

Core Team member for the assigned guideline analysis.

Contents per Section 4.1.1.4.

Responsible Organization: N/A

Due: 2/18/91

# 4.2.1.4 <u>Informal Description of the Methodology and Informal Briefing Material</u>

Deliverable #1: Letter to the TAMSS Task Manager containing the

methodology as described in Section 4.1.1.4.

Responsible Organization: TEMSS

Due: 3/29/91

Deliverable #2: Informal package of briefing material to transmit to

YMPO for subsequent transmittal to CCRWM Director.

Responsible Organization: TaMSS

Due: 5/1/91

#### 4.2.2 ESSE EVALUATION DELIVERABLES

#### 4.2.2.1 Assemble Information/Determine Confidence/Perform Evaluation

Deliverable: Letter from responsible ESSE Core Team member to the

TEMSS Task Manager containing the evaluation of the

assigned guideline, information used, and all

references (hard copies).

Responsible Organization: TAMSS

Due: 5/6/91

#### 4.2.2.2 Integrate the Guideline Evaluations

Deliverable #1: First draft of ESSF Report for T&MSS review

Responsible Organization: T&MSS

Due:

7/1/91

Deliverable #2: First draft of ESSE Report for YMPO review

Responsible Organization: T&MSS

Due:

7/29/91

Deliverable #3: Revised ESSE Report (incorporate peer review)

Responsible Organization: TIMSS

Due:

1/10/92

#### 4.2.2.3 YMPO Review

Deliverable #1: Management review of draft report to approve for

release to peer review panel

Responsible Organization: YMPO

Due:

8/26/91

Deliverable #2: Foilowup review of peer-reviewed report

Responsible Organization: YMPO

Due:

1/30/92

#### 4.2.2.4 Peer Review

Deliverable:

Peer Review of ESSE Report

Responsible Organization: TLMSS

Due:

12/10/91

#### 4.2.3 ESSE MANAGEMENT DELIVERABLES

#### 4.2.3.1 Implementation Plan

Deliverable: ESSE Implementation Plan

Responsible Organization: TEMSS

Due: 1/28/91 (submittal for YMPO approval)

4.2.3.2 Monitoring

Deliverable: Per YMPO direction

4.2.3.3 Change Control

Deliverable: Per YMPO Direction

APPROVALS

## Attachment I

Reference: USDOE Letter Carl P. Gertz to John H. Nelson dated 1/23/91, Scope of Work (SOW) to Prepare the Technical and Management Support Services (TEMSS) Plan for Development of Site Suitability Methodology (attached).

# Part I - Identification and Definition

**1.** -

. . . .

The scope of this grading package covers the development and implementation of the Plan for Development of Site Suitability which in turn is requested in the above reference. The effort will be integrated, coordinated and participated in by the TEMSS. The overall effort will be conducted under the TEMSS QAPD N-QA-093.

# Part II - Statement of Importance

This effort involves planning the early determination of site suitability and performance of the first phase thereof. The effort includes a management directed evaluation of site characteristics in consonance with 10CFR960 to determine, based on available data, whether disqualifying conditions exist of the qualifying conditions cannot be met. In addition, the effort determine, based on available data, whether disqualifying conditions exist or will identify 1) data which must be obtained in those instances where such does not exist to enable a disqualifying or qualifying determination and 2) that data which has been used in the determination(s) which might require equalification per MUREG-1298. It may be viewed as a dry run for the eventual official performance of the tasks which will be performed with the necessary degree of vigor to be used in the licensing process.

> · Even though some of the WBS elements (Attachment III) appear at a higher level on the QAL and FRL the effort described here has been determined to be non-quality affecting at this time, however, since the approach and results are: 1) intended to be employed in a public interaction process, 2) will be used by OGD to assess future program action plans including licensability of the site for those conditions evaluated, and 3) some of the results may be useable directly in the licensing process without need for reperformance (but, if so will have to be qualified in accordance with applicable quality program requirements) it is concluded that application of all criteria appropriate to the task effort should be employed.

A major purpose of this Revision 1 to the grading package is to clarify that this effort is non "quality affecting" because it is a management directed "screening" effort.

Worker Radiological Safety is not affected by this activity.

Operational Reliability is not affected by this activity.

# Attachment II

# Part III - Grading

# Criterion 3:

No design control provisions are required to implement this activity. The requirements of Criterion 20 for Scientific Investigation will be observed.

# Criterion 8:

This criterion is applicable to items only and there are no items included in this activity.

# Criterion 9:

This criterion is applicable to items and processes performed as a part of scientific investigations. No items or scientific investigations processes are a part of this activity.

# Criterion 10:

this criterion this activity. This criterion is applicable to items only and there are no items included in

Criterion 11: This criterion is applicable to items only and there are no items included in this activity.

# -Criterion 12:

This criterion is applicable to items only and there are no items included in this activity.

# Criterion 13:

This criterion is applicable to items and samples collected for site characterization. No items or sample collection is a part of this activity.

### Criterion 14:

This criterion is applicable to items only and there are no items included in this activity.

## Criterion 15:

This criterion is applicable to items only and there are no items included in this activity.

TESS-001 Rev. 1 Page 4 of 6

# Criterion 19:

Approved software QA programs and procedures do not exist at this time. To assure that the products of this effort can be qualified at some future point to meet this criteria copies and versions of all software employed in these efforts, including input and output data, shall be retained to enable reperformance of associated analyses at a future date should management so direct.

SCOPE OF WORK (SOW) TO PREPARE THE TECHNICAL AND MANAGEMENT SUPPORT SERVICES (T&MSS) PLAN FOR DEVELOPMENT OF SITE SUITABILITY METHODOLOGY

- References: (1) Ltr, Bartlett to Gertz, dtd 12/21/90
  - (2) Office of Geologic Disposal (OGD) Plan for Developing and Implementing a Method for Early Evaluation of Site Suitability, dtd 12/90

Reference 1 provided guidance from John Bartlett, Director of the Office of Civilian Radioactive Waste Management, directing the OGD to prepare a plan for the U.S. Department of Energy's efforts in developing a general method for evaluating site suitability and to implement this method in an early evaluation of site suitability. Reference 2 is the requested plan, currently undergoing Quality Management Procedure 06-04 review, which will be provided to T&MSS as soon as it is approved.

This letter directs TAMSS to prepare an implementation plan, based on Reference 2, for early evaluation of site suitability. The plan will be entitled "Developing and Implementing a Method for Early Evaluation of Site Suitability." The attached SOW provides quidance for development of this implementation plan.

Please submit to the Yucca Mountain Site Characterization Project Office your proposed implementation plan by January 28, 1991, for approval. Also provide a separate summary of the funding estimate to perform this effort based on preliminary scoping.

John H. Nelson

Direction for subsequent Change Control Board action concerning potential impacts will be based on the approved implementation plan and the resulting funding estimates.

If you have any questions, please contact me at 794-7920.

# CEVERSING AND IMPLEMENTING LIMBLE . FUR MARKET EVALUATION OF LITE OF A STREET

The Technical and Management Support Frv. (et . DvMCC) is stractic is supprepare, for Yucca Mountain Site Character strong to rect String YMES: approval, an implementation plan for "Teveloping and Implementing a Method for Early Evaluation of Site Suitability." Tolk implementation plan is to

- Flan the work described in the Office of Declopic Disposal (IGD) Flan for Developing and Implementing a Method for Early Evaluation of Site Suitability, December 1990;
- Identify the organizations that will participate and relate their responsibilities and authorities:
- 3. List the Quality Assurance requirements for this effort:
- Propose a schedule and show the sequence of activities to be accomplished; and
- 6. List the requirements for management of the effort.

The following is specific guidance for use in development of this implementation plan. The plan's format and contents, beyond the guidance provided below, will be determined by TAMSS.

Tames is to provide the implementation plan to the YMPO by January 28, 1991, for approval to implement.

### I. WORK SCOPE

T&MSS is to prepare an implementation plan (at appropriate levels of detail) to perform the work presented in the OGD Plan (noted above). The implementation plan will result in

- Identification of the method for early site suitability evaluations, to be presented by the Director of the Office of Civilian Radioactive Waste Management (OCRWM), in a public forum in mid-1991, and
- Completion of the first phase of the early suitability evaluation by January 1992.

The implementation plan is to include the including

- A configurate the Early Evaluation of Oute Cutrapolity with this time
  - Test and Evaluation Plan (178, 1997).
  - L. Exploising Shatt Facility ESF, Alternative Study,
  - Pality Hills unit evaluation,
  - 4. Test Pricritization effort,
  - Golder Associates Incorporated performance assessment effort, and
  - 6. Electric Power Pesearch Institute performance assessment effort.
- E Indicate participating organizations and list the authority and responsibility of each organization. Use the following guidance:
  - 1. The YMPC will be responsible for work authorization, budget allocation, review and acceptance of the implementation plan, review and acceptance of the effort deliverables, and acceptance of the final report. The lead organization for the Early Evaluation of Site Suitability effort will be T&MSS.
  - 2. TEMSS will be responsible for overall task integration, including monitoring and coordinating the activities of the Yucca Mountain Site Characterization Project participants involved in this effort. TEMSS will monitor and report the progress of the tasks to the YMPO at monthly meetings.
  - Potential sources of technical expertise needed for this suitability task include the following:

# Preclasure Guidelines:

### 

## Environmental Quality

| Environmental Quality | TAMES, DRIT, EGAG |
|-----------------------|-------------------|
| Socioeconomic Impacts | T&MSS             |
| Transportation        | TEMSS             |

# Ease & Cost of Siting, Construction, Operation,

| Closure                 |      |       |       |  |
|-------------------------|------|-------|-------|--|
| Surface Characteristics | SNL, | USGS  |       |  |
| Rock Characteristics    | SNL, | USGS, | T&MSS |  |
| Hydrology               | SNL, | USGS  |       |  |
| Tectonics               | SNL, | TEMSS |       |  |

<sup>7</sup>Desert Research Institute

- 4. TEMSS, at various progress points, may determine the need for additional technical support, either from OGD participants or participants external to the OGD. TEMSS will make arrangements for this support with YMPO knowledge and concurrence.
- C. Develop Interface Memoranda of Understanding to establish the responsibilities and authorities with the participants noted in Section I.B above.
- D. Establish and approve Quality Assurance requirements for this effort in a Grading Package, per AP-5.17Q and AP-6.28Q. The grading package will be an attachment to the plan.

E. Detail how TSMSS will monitor and measure performance, including analysis and control of variances.

F. Include a budget estimate of at least the TAMSS effort.

# II. DELIVERABLES AND MILESTONES

The implementation plan will include the following deliverables and milestones as contained in the OGD Plan for Developing and Implementing a Method for Early Evaluation of Site Suitability:

| TAMSS Implementation Plan (for approval)             | 1,28,41  |
|--|----------|
| Briefing Material, transmitted to the OCRWM Director | 5/01/91  |
| Phase 1 Evaluation Report (for review)               | 6/15/91  |
| Complete Peer Review                                 | 11 1, 91 |
| Final Evaluation Report, transmitted to the CCFWM    |          |
| Director   | 1/2/92   |
