Re: Restart of Ore Preparation Phase of Uranium Hexafluoride Process at Honeywell  
Metropolis Plant  
License No. SUB-526  
Docket No. 040-03392

Dear Sirs:

In my letter to the USNRC dated March 4, 2004, we described our plans for a phased approach to restart of the uranium hexafluoride process. We also described the readiness assessment that would be conducted prior to restart of each phase.

We are nearing completion of the readiness assessment process for ore preparation. An in-process audit of closure packages was conducted this week. A Corporate restart assessment has also been completed. As a result of the in-process audit of closure packages, we have confirmed completion of nearly all ore preparation restart items. The open restart items are identified in Attachment 1. We estimate that we will complete the remaining open restart training items on March 27, 2004.

We request NRC concurrence of our readiness to restart the ore preparation phase of the uranium hexafluoride process upon verification by the NRC on-site inspectors that the open ore preparation restart items are complete.

Sincerely,

Rory J. O'Kane  
Plant Manager
