CURTISS-WRIGHT CORPORATION - APPLICATION AMENDMENT,
DOCKET NO. 50-39

Attached for your usual consideration are six copies of an application by Curtiss-Wright for a construction permit to authorize modifications of its research reactor involving the cooling system, purification system, and building changes, to accommodate the additional related equipment.

It is Curtiss-Wright's stated intention that on completion of the proposed construction, it will request amendment of its operating license to authorize operation at four megawatts. It is, therefore, advisable that attention be given, in reviewing the application and any amendments thereto, to any proposed installation or provision for installation of a loop or experimental facility which would qualify the reactor as a testing reactor.
