*release*

The document (Appendix 2c to NR1738) may be released.

The NRR review team is re-examining NUREG-1738 in response to a recent FOIA request and using more recent guidance on withholding of information. It is likely that the review will determine that NUREG-1738 does not contain sensitive homeland security information. We will let you know as soon as we have completed the review of the whole report and have made a final determination on whether to release the document.

>>> PDR 04/05/02 03:37PM >>>

This document (citation below) is publicly available in ADAMS. It is an appendix from NUREG-1738 "Technical Study of Spent Fuel Pool Accident Risk at Decommissioning Nuclear Power Plants," (Appendix 2C). NUREG-1738 was removed from public ADAMS in the post-September 11 review. We are wondering if this appendix should be publicly available.

Accession Number: ML012620403  
Title: Draft NUREG-XXXX, [6:7], Appx E, Technical Assessment Generic Issue 186: Potential Risk and Consequences of Heavy Load Drops in Nuclear Power Plants.  
Document Date: 9/19/01  
Estimated Page Count: 12  
Document/Report Number: NUREG-1738

Thanks!
