

Categories of NMSS/Materials information:

- Inspection reports on Paducah, Portsmouth
- Listings of locations of NRC offices, fuel cycle facilities and other documents containing location information
- Fact sheets on fuel cycle facilities, gaseous diffusion plants, "The NRC and How it Works," NUREG/BR-0256)
- Response Technical Manual, Info Digest
- Abnormal Occurrence information, certain enforcement material and Part 21 reports
- Certain press releases (contain directions to a GDP, other locations of facilities)
- Commission voting record for Abnormal Occurrence report
- NUREGs that reference UF6 releases
- Various SECY papers; SRMs; weekly reports
- PNs containing location of facilities
- Various NUREGs containing information on security of material, consolidated guidance about materials licenses (broad scope, irradiators, etc.)
- Rulemakings (entombment, Part 71)
- Joint NRC-EPA sewage sludge report lists locations of publicly owned water treatment facilities that have had contamination problems
- Various documents on LLW facilities

Categories of RES Information:

- Fire events update report
- Accident Sequence Precursor Reports
- Common-cause failure reports
- FSARs
- Standard Technical Specifications

TT-37

- Technical Training Center Technology Systems Manuals
- Generic communications - identifies generic plant vulnerabilities

Pending agency guidance, will restrict access to supporting models and databases by non-NRC/contractor entities, including:

- Search requests of Sequence Coding and Search System
- Standardized plant analysis risk models
- Reliability and availability data system

NRR

Related Issues:

- Staff needs guidance on how to process requests for deleted information. Are we still providing these deleted items to the public upon request? OGC maintains FOIA restrictions are still in effect and no additional exemptions have been issued. Also, at all public meetings, handouts are distributed that must be made publicly available to all.
- NRR recommends we delete entire categories of documents (i.e. reg guides, NUREGs) and re-post them once a more detailed review can be performed.
- Most correspondence and inspection reports identify facility and material locations.
- NMSS recommends Agreement States be requested to remove similar documents (what about licensees?)
- There are links to external web sites, i.e. NEI, DOE, EPA, that may also contain sensitive material
