

(NMSS) / NSIR / SECY

release

ccm/NSB

From: Catherine Haney
To: Mindy Landau; OPS Ctr SGT Counterpart Link
Date: 10/16/01 7:27PM
Subject: Fwd: Re: RASCAL

Please note attached e-mail message regarding RASCAL. This is something that you might want to follow.

Also, at today's Safeguard's meeting with Fuel Cycle Licensees, the Westinghouse representative brought to our attention information that can be accessed from the Web. Aerial photos/topographical maps of licensee's sites can be accessed using Terra Server, a microsoft MSN product. This server accesses data on the USGS website. The representative from the Westinghouse site showed us a photo of his site that he had downloaded this week. You might want to learn more about this software/website and what information can be accessed about our sites.

 Subject: Re: RASCAL

Steve,

I had originally asked Tony to followup on this that was the reason for his original e-mail to you.

NMSS release

With lat/long info on key sites, I presume that you (IRO) will followup to limit access to RASCAL? It does not seem reasonable that we should be making such info available in this environment, considering that we're withdrawing far less significant info from distribution.

NMSS/DWM will presume that IRO is following through with your contractor to limit access/distribution, unless you tell us otherwise. It's IRO's call on whether or not to limit access to it (including third-party access through any contractor), but I think that a program with latitude/longitude info on a number of key sites should be among the first to be withheld.

~~Scott~~

PSIR release

>>> Stephen McGuire 10/16/01 11:51AM >>>

It does have the lat/long for reactors and fuel cycle sites. There is no restriction on distribution to the public. It is not available on the web.

>>> Anthony Huffert 10/15/01 12:46PM >>>

Steve -

NMSS release

Recently our Branch has been reviewing Web and ADAMS documents for possible removal, in response to the terrorist attacks. I realize that RASCAL contains site-specific information for power plants and materials sites. Is it readily available to the public and could one gain access to it via the Web?

~~Tony~~
