Subject: Utility Advisory Board meeting

I talked with Larry Parme late 3/26/02. He indicated that a UAB meeting would take place at the Hilton Embassy Row in DC on 5/21. Larry wanted someone from the NRC to speak for 15 minutes on both the PBMR and the MHTGR preapplication activities, and the current approach to preapplication activities for the GT-MHR. Larry would like a few sentences to be spent on future licensing of the GT-MHR given the current Exelon situation and the PBMR. LARRY FELT THAT JOHN FLACK WOULD BE THE RIGHT PERSON to cover the high level short discussion.

Larry also indicated that he didn't want more than 3 NRC persons at the meeting, and the Ron Lloyd, Amy Cabbage and John Flack would be the invitees assuming that they are available. What Larry didn't want was a hoard of NRC folk coming to the meeting.

So, John, are you up to a 15 minute talk, given the topic? Please let me know ASAP, and I will contact Larry to give him our decision. Amy... are you available to attend the meeting?

The proposed agenda looks good.... areas to be discussed include fuels, engineering, hydrogen, licensing, GT-MHR status of the Russian design, GT-MHR business plan presentation, and DOE demonstration project setup

Thanks,

RON
