Subject: Radiac - again

In connection with the letter from Rep. Velasquez, Anne Boland in the EDO's office wants to know what the possession limits and the actual inventory are for Radiac. I have a copy of their NRC license, which shows that they're authorized for 100 curies of any byproduct or source material, 1400 curies of any byproduct material, 5000 curies of tritium in exit signs, and 700 grams of SNM. All are in prepackaged waste. According to New York, they actually have less than 30 curies, 95% of which is tritium or carbon-14. Do you have any other info on possession limits or actual inventory?

Can you tell her about the thresholds for CM's, which I understand from Hickey are SGI?
