Anne,

I have a copy of their NRC license, which shows that they're authorized for 100 curies of any byproduct or source material, 1400 curies of any byproduct material, 5000 curies of tritium in exit signs, and 700 grams of SNM. All are in prepackaged waste. According to New York, they actually have less than 30 curies, 95% of which is tritium or carbon-14. Charlie Cox has a copy of the New York license, which differs slightly. He will tell you about that and about the thresholds for application of CM's.
