Memorandum

TO : File, 19-1398-29

DATE: MAY 23 1967

FROM : *W.H. Ray*
W. H. Ray Irradiated Fuels Branch
Division of Materials Licensing

SUBJECT: INCREASED CONTAMINATION CRITERION

As explained by telecon May 5, 1967, Martin-Marietta personnel have found it impracticable to decontaminate the inside of Compartment A of the Cell 4 Process Box to the initially established criteria without incurring inordinate personnel exposure and considerable expense.

The letter of May 8, 1967, requests authorization of a modest upgrading of the criterion for residual contamination in Process Box Chamber A during plant retirement. Since this does not alter the factors depended upon to protect the public (ref. memo Ray to file 19-1398-29, dated Feb. 9, 1967), it is recommended that the license be amended to approve the requested change.
