

**Attachment 1**

In addition to the information currently designated as proprietary in the Final Report, Westinghouse finds that the following information is also proprietary and should be withheld from public disclosure.

As noted:

- Page ii and Section 4  
CROSSFLOW™, X-Beam Designation, the typical uncertainty is proprietary. ( $\leq 0.5$ )
- Page iii  
Table on Page iii is proprietary.
- Appendix B  
Our understanding is that this information is proprietary to Exelon Corp.
- Section 4, "Conclusions and Findings"  
All tables in this section.

In summary form the tables exacerbate the problems inherent in the report as reflected in our cover letter and as a result, the tables would likely facilitate an unfair competitive evaluation of the CROSSFLOW™ product based on dated and incomplete information. This is consistent with our prior position which the NRC appears to have admitted but not resolved.
