Attached is the map that has the current post-RFO24 discharge fuel assemblies labeled in dark green on the legend and reflects the 136 discharged fuel assemblies also color coded on the pool map.

Thanks,
Greg

Can you folks answer Beth's question?

The file I have is labeled as Post RFO24 and has a 4/29/04 date.

Thanks.

John,

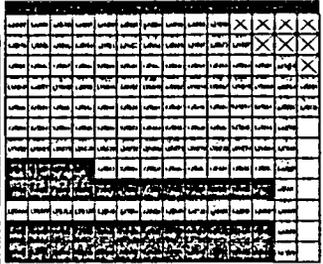

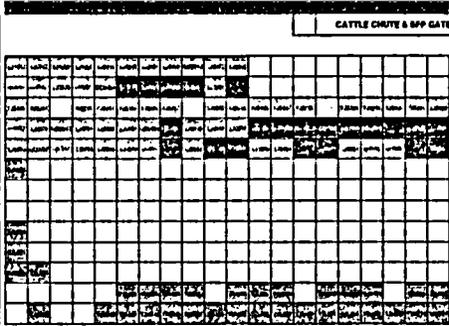

What timeframe in the outage is this? Is it after refueling was completed? I noticed that there are bundles shown (and color coded) on the map in locations where the new fuel (yellow) and ones to be reinserted into the core (green) were stored. I didn't think any changes to the original load schedule were made during the outage.

Thanks,
Beth
