Jeff,

10 CFR 19.11(d) simply states that required documents (e.g., NRC Form 3, NOV's related to RP, etc) shall appear in sufficient number of places to permit individuals to observe them on their way to or from licensed activities. Does this require postings at the plant, PSB, and training/Corporate buildings? I'm not sure. I recommend you contact my Project Manager Bob Pulsifer (NRR) and get his impressions of "minimum" posting requirements. Let me know if you aren't getting the info you need...

Dave,

We have many bulletin boards with NRC required postings in accordance with 10CFR19.11 around the plant and even in the corporate and training areas up here in Brattleboro.

My question:

Is there any guidance on how many places or locations these postings should be placed? We have what seems to be too many locations and some of them are in areas few people are likely to even see. Licensing is taking responsibility for these postings as part of adoption of a new ENN procedure in the near future and we want to make sure it is applied appropriately, but not excessively. Any recommendations/information would be greatly appreciated.

Thanks.  
Jeff Meyer
