Subject: Mine Unit 4 Release - Docket 40-8964

Rick, John, Steve:

Please consider this formal notification that PRI had a release of Production Fluid at the Mine Unit 4, Headerhouse 1 area at Smith Ranch on July 22, 2004. The release occurred at a valve station contained in an inverted culvert (manhole), when a corroded metal fitting on the 14 inch Production Pipeline leaked fluid. It is estimated that 2700 -5000 gallons of Production Fluid was released. Most of the release soaked in to the ground. About 200 gallons was retrieved with the Vac Truck. No fluid reached "Waters of the State".

The pipeline was shut down and the repair made the same day.

A written report will be submitted within 7 days.

Thanks

Bill Kearney
