Subject: Oyster Creek - Relief Request for Roll Expansion Repair **(TAC MC1099)**

Tom:

We reviewed your 7/20/04 response, and would like a conference call with you to discuss the following issues:

1. If additional roll repairs of housing penetrations and/or re-roll of the housing penetrations 42-43 and 46-39 are performed during the R20 outage, will you perform VT-1 of the stub tube and stub tube-to-vessel attachment weld of these additional rolled and/or re-rolled repaired penetrations at the next refueling outage(i.e. R21)?
2. What leakage rates, if any, will be used for the repaired housing penetrations during R20?
3. Confirm that after cycle R20, if the ASME Committee finds the proposed code case unacceptable, an ASME Code repair (weld repair) of the roll repaired housings will be performed at the next schedule refueling outage.
4. Confirm that Oyster Creek will continue the HWC program through the R21 outage to support the extension of these repairs.

This e-mail aims solely to prepare you and others for the proposed conference call. It does not formally request for additional information, nor does it state an official NRC staff position.

Peter S. Tam, Senior Project Manager
Project Directorate I-1
Division of Licensing Project Management
Office of Nuclear Reactor Regulation
