Subject: Re: Snowpack Calculations For Exelon

George:

An RAI with an explanation will be sent to Exelon in the near future.

Brad - If you will recall, we met at the NRC Site Audit at the Clinton Power Plant on March 2. At the time, you had asked me a number of questions and I wanted to get some clarification on one of them. You had indicated that you came up with a snowpack weight of 24 psf, whereas we used 22 psf (SSAR Section 2.3.1.2.3). It was not clear to me what your calculation would have been based on to get 24 psf. Could you elaborate on where you got the 24, and what it was based on (i.e., assumptions for snowpack density, etc.)

Thanks,
George
