Subject: WCS exemption

Bill,

Per our discussion, NRC does not have an issue with WCS conducting a bench scale treatability study with NOCHAR and SNM waste which meets the conditions of the Order.

In letters dated August 6, 2003 and March 15, 2004, you requested additional chemicals be added to the list of chemicals in Condition 5 of the Order. As we discussed, because WCS uses a batch process for treatment, we would like to revise the Order to remove specific chemical names and instead add a mass limit for stabilization not to exceed the concentration limits in condition 1 times 600 kg. You would also be restricted to not using magnesium oxide, per condition 2, in the treatment.

If this is agreeable, we will coordinate with the State of Texas and begin amending the Order.
