Subject: RIII comments

I looked at the comments that Cathy forwarded to me. Here are my thoughts:  
Comments 1 and 7: ✓ I believe that the working group decided to delete the phrase "and provides inpatient care", therefore this should be deleted from the FRN.

Comment 2: add "provide high confidence" to section 8.34 of NUREG.

Comment 3: It is true that 35.69 only requires "radioactive material" on labels. This is consistent with Part 20, but there is no threshold.

\* Comment 4: Added sentence to section 8.39 that implied that licensees would ask whether breast-feeding prior to release.

Comment 5: Deleted statement about committing to model procedures.

Comment 6: Clarified in section 8.33 that surveys must be done in patient's rooms after administrations requiring a written directive and adequate surveys must be done prior to release of facilities (including patients' rooms) for unrestricted use.

Comment 8: True statement, however I do not see the conflict in the NUREG.
