Item 9. Experience with Radiation for RPO and Users.

Isotope	Maccimum Amount	Where Experience Was Gained	Duration of Experience	Type of <u>Use</u>
Thomas B. Grud (Radiation Pr Officer)	<u>cci</u> rotection			
Cobalt-60 Cesium-137	600 curies 350 curies	Wayne State Univ. Wayne State Univ.	3 yrs_(Cai 3 yrs (Dog	libration & simetry Studies
Iodine-131 Misc (3-94)	300 millicu Various amts (from microcuries to several 100 millicuries)	ries " " " Univ. of PGH General Electric	2 yrs Ingestion Studi 5 yrs Biological Stud routine health physics, etc.	

Duane E. Voeller

One year at HDL using  $Am^{2}$  and Po<sup>210</sup> to test solid state nuclear particle detectors. Maximum amounts .05 and .02 microcuries respectively.

#### Ira R. Marcus

One year at HDL using Am<sup>241</sup> and Po<sup>210</sup>. Maximum amounts .05 and .02 microcuries.

Item 10. Radiation Detection Instruments

Type of Instruments	Number Available	Radiation Detected	Sensitivity Range (Mr/Hr)	Window Thickness (mg/cm <sup>2</sup> )	Use
Nuclear Measurements Corp. PC-3A Gas Flow I.P.C.	l	Alpha, Beta Gamma	-	- M	leasuring
Tracerlab SU-1H Ioni- zation Chamber Survey Meter	1	Beta, Gamma	0-1500	2–3 S	urveying
Nuclear Chicago Model 2586 Ionization Chamber Survey Meter	1	Beta, Gamma	0-2,500	ls	urveying
Anton CD V-700 G-M Survey Meter	6	Beta, Ganma	0-50	30 M	onitoring
Victoreen Model 440 Low Energy Ionization Chamber Survey Meter	l	Beta, G <i>a</i> mma	0-300	1 S	urveying

Item 11. Method, Frequency, and Standards Used in Calibrating Instruments.

Calibration consists of the following:

1. Instrument is placed at specific distances from a standard reference source.

2. The calculated values at various distances from the standard reference source will be compared with the observed meter readings.

3. Calibration correction curves will be affixed to each instrument.

4. Frequency of calibration for all instruments will be at intervals of three months.

Standard Reference Sources:

Cobalt-60	12.3 mr/hr at one meter	N.B.S.	(1-26-61)
Cobalt-60	1.07 mr/hr at one meter	N.B.S.	(1-26-61)
U <sub>3</sub> 08	3,115 α/min	N.B.S.	(8-10-61)
Radium (D+E)	28,000 α c/min plus beta	N.B.S.	(3-23-62)

Item 13. Facilities and Equipment.

Byproduct materials will be used in standard laboratory areas. Handling tools, containers, shielding materials, etc. will be furnished by the Radiation Protection Officer.

Item U. Radiation Protection Program.

#### General

There is in HDL a Radiation Control Board composed of the Radiation Protection Officer, a representative of the administrative office, and several technical members trained or experienced in the use of radioactive materials. The Chief Health Physicist of the National Bureau of Standards is a consulting member. This Board is responsible for the formulation of rules and procedures necessary to (1) minimize hazards due to ionizing radiation (2) insure compliance with all applicable regulations.

Specifically the Board will:

a. Advise the Commanding Officer on the status of radiation hazards.

b. Prepare, amend, and/or review rules and regulations pertaining to the safe use and storage of radiation sources.

c. Review and approve proposed locations of radiation sources.

d. Provide for the review of and authorization for all uses of existing and proposed radiation sources within the Laboratories.

e. Serve as a reviewing committee for incidents involving sources of radiation which could result in injury or overexposure.

f. Recommend whether disciplinary action should be taken when individuals using radiation sources fail to observe safety recommendations, rules or regulations.

g. Maintain a record of actions taken.

h. Prepare and maintain minutes of the Radiation Control Eoard's proceedings.

i. As required, and at least annually, advise the HDL Central Safety Board regarding RCB activities and developments, or problems requiring HDL Central Safety Board guidance or action.

Specific detailed procedures of the HDL radiation protection program are given in the HDL Radiological Safety Manual, Administrative Circular 032-1.

Leak testing will be done by Mr. Thomas B. Grucci whose training and experience are given in items 8 and 9.

Sealed sources containing byproduct materials shall be leak tested at intervals not to exceed 3 months.

The leak test will be made in the following manner: The source will be wiped with a filter paper and the filter paper will be counted in an internal gas-flow proportional counter.

Item 15. Waste Disposal.

Waste pickup and ultimate disposal will be done by U. S. Army Edgewood Arsenal Operations Division - A.E.C. License No. 19-1826-6.
