Betty,                   DOC. 40-8964

. Please Docket.

Thanks.

John L.

Rick, John, Steve:

Please consider this formal notification that PRI had a release of Production Fluid at the Mine Unit 2, Headerhouse 4 area on September 6, 2004. The release occurred at Injection Well 2I-122. An Operator observed injection fluid running from the well. The well was turned off. Investigation with a downhole camera showed the leak occurred at the first casing joint located about 15 ft below ground. The exact cause for the failure is still being evaluated.

It was estimated that 1600 gallons of Injection Fluid was released. No fluid reached any "Waters of the State". All fluid soaked in to the ground.

A written report will be submitted within 7 days.

Thanks

Bill Kearney
