Subject: RE: IAEA DS-161 Review and comment

In the Table for NORM (Section 4.1) if the first value is for U-235 chain, then OK. If it is U-238 chain, then it should be ten times higher (0.5 vs 0.05 Bq/g).

Subject: IAEA DS-161 Review and comment

Dear Colleagues:

Please respond to this e-mail, if you plan to attend in person, because I will need to enter your name and agency into our security system.

The meeting is in T8-A1, and I've scheduled the room from 1:00 p.m. to 4:00 p.m. We will take only as much time as we need.

I have reserved 8 telephone lines for those who cannot attend the meeting in person. The local number is:

301 231-5539

toll-free is:

1-800-638-8081

YOU MUST LISTEN TO THE ENTIRE MESSAGE, and at the tone enter:  *Ex. 2*

The purpose of the meeting is to gather the major comments from the respective agencies. NRC spent fuel folks are interested in transportation issues, but are in Vienna, Austria this week. Thus, their additional comments will be coming later. The collective comments will be combined and re-distributed for concurrence. NRC upper management also has an interest in our comments, and may also have input. That is, there may be several iterations before the combined U.S. comments are ready for submission to IAEA.

Attached in MS Word and .pdf formats are: the proposed agenda; the incoming subject guide, the technical basis report and a letter from IAEA; and the comments we sent in October 2002.

Best regards,

Bob
