**Subject:** Release From Mine Unit C Pipeline

Rick, Steve, John: *Docket 40-8964*

Please consider this formal notification that PRI had a release of Ground Water Sweep fluids at a 6-inch pipeline in the C-19 Valve Station. This is in Mine Unit C that is in Restoration. The release was detected at 4:00 pm on October 9, 2004. Note that yesterday was a Company holiday. Approximately 5,000 gallons of fluid with a uranium concentration of about 7 mg/L were released and 2,400 was recovered with the Vac Truck.

The Valve Station was excavated and it was determined that there was a hole rusted in the steel tee.

No fluid reached "Waters of the State". No significant impacts are expected.

A written report will be submitted within 7 days.

Thanks

Bill Kearney
