Subject: RE: FW: Oil Lift Pump

Tony,
The Operations procedure requirement for a 7 minute run is a prestart issue. The 7 minutes is a "minimum" time to ensure proper lubrication in preparation for RCP pump start. The white paper to which you refer is for a 5 minute run and is not for a "prestart", it is intended to maintain oil reservoir levels. If I can be of further assistance on this please reply back.

Jim Taylor

Subject: Re: FW: Oil Lift Pump

According to your procedure, you must run the lift pumps for at least 7 minutes. Your white paper stated they only are run for 5 minutes.... it appears operators have a 3 minute window..... does this sound right?

Tony:

Enclosed is information on the RCP thermal overload settings.

There was a question should the RCP starting procedures have a CAUTION statement regarding the lift pumps: Procedure 40OP-9RC01 section 3.7 cautions that the lift pump must be run 7 minutes prior to starting the RCP and follow on sections for starting RCPs (4.3.18 for example) also contain a step for starting each pump.
