Date: November 9, 2004 **Project No.:** 4000-PA4072-02
To: Mr. John T. Buckley
U.S. Nuclear Regulatory Commission
Document Control Desk
Washington, DC 20555-0001
Re: Kaiser Tulsa Site
Thorium Remediation Project

We are sending you the following item(s):

Quantity	Date	No.	Description
1	November, 2004		RECON Procedure: REC-WP-7-05 Rev 2

These are transmitted as checked below:

- For your use Enclosed
 As Requested Under Separate Cover via: _____
 Return of requested material
 Other: For your information.

Remarks: On behalf of Kaiser Aluminum & Chemical Corporation, the above referenced procedure is transmitted for your information.

Copy to: Distribution (see attached) **Signed:** Chuck Beatty

If enclosures are not as noted, please notify our office immediately.

RECON Work Plan & Procedures Manual

RECON Procedure: REC-WP-7-05 Rev 02

Loading Railcars

1.0 PURPOSE

The purpose of this procedure is to provide instruction for loading railcars, unloading railcars and for surveying railcar staging area.

2.0 DEFINITIONS

N/A

3.0 PREREQUISITES/PRECAUTIONS/LIMITATIONS

- 3.1 Review Safe Work Permit (SWP) for safe work practices.
- 3.2 Only qualified operators will be allowed to operate equipment.
- 3.3 Initial onsite calibration will be conducted by the manufacturer's representative before scale is put into service. An object will be selected by the manufacturer's representative to perform daily checks. The object selected will be taken to a certified scale so that the weight of the object can be verified; this documentation will be kept onsite in Recon's project records. Re-calibration will be in accordance with the manufacturer's specifications.

4.0 EQUIPMENT

- 4.1 Front End Loader with a "LOADRITE model LD940" bucket scale and "LOADRITE model LD941 Data Module".
- 4.2 Water Truck(s)

5.0 PROCEDURE

- 5.1 Calibration of Bucket Scale
 - 5.1.1 A daily check will be done each day that railcars are loaded to verify the bucket scale is within calibration. A Daily Bucket Scale Check Log (Form REC-WP-7-05-1) will be completed and become part of Recon's project records.
- 5.2 Loading Railcars
 - 5.2.1 Check equipment and fill out Equipment Inspection Form.
 - 5.2.2 Operator will input information into the LD940 data module i.e. ticket number, rail car number, project etc. Then proceed to designated stockpile, begin loading bucket, operator will be responsible for not overloading the bucket to avoid spillage during transport to the rail car. Operator will "ADD" bucket weight as described in LOADRITE Reference Manual and then proceed to rail car and deposit the bucket of material into the rail car. This step will be repeated until the rail car is loaded (98 - 100 tons).
 - 5.2.3 A daily check will be done each day that railcars are loaded to verify the bucket scale is within calibration. A Daily Bucket Scale Check Log (Form REC-WP-7-05-1) will be completed and become part of Recon's project records.

RECON Work Plan & Procedures Manual

RECON Procedure: REC-WP-7-05 Rev 02

Loading Railcars

5.3 Unloading Railcars at the Kaiser Site

- 5.3.1 Railcars exceeding the specified weight limits prior to leaving the Kaiser Site will be unloaded using manual or mechanical means as appropriate. The front end loader operating with a Loadrite model LD940 bucket scale or equivalent will be utilized for weighing the removed material to verify that the overloaded materials have been removed.

6.0 RADIOLOGICAL SURVEY

6.1 Railcar staging area

- 6.1.1 The railcar staging area shall have contamination surveys conducted as necessary to support site operations, to assess changes in radiological conditions and to evaluate operational readiness of the area.
