FOI/PA REQUEST

Case No.: 2005-0024  
Date Rec'd: 10-22-04  
Specialist: Prof  
Related Case: \_\_\_\_\_

October 5, 2004

Dear Dr. Miller

I am working independently, but in conjunction with the University Of Texas Southwestern Medical Center (UTSWMC) in Dallas, to determine the need for a enterprise web-based tracking system for inventory, usage and disposal of radioactive materials in a research environment. It is our hope that the tracking system will allow both small and large institutions, academic and industrial having either specific or broad scope radiation licenses, to have a single centralized interface to register then track decay / disposal radioactive material usage and manage instrument calibration and personnel records.

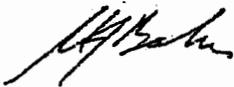

Following a conversation between a colleague, John Elwood, and Bernard Stapleton, under the Freedom of Information Act, I would like to request the following licensing information on a State-by-State basis:

- Number of Specific licenses issued to (a) Academic (b) Industrial and (c) Medical/hospital institutions (d) Research and Development
- Number of BroadScope licenses issued to (a) Academic (b) Industrial and (c) Medical/hospital institutions (d) Research and Development
- Total number of Specific licenses and total number of General licenses
- If available, number of compliance violations, including type of violation in (a) Academic (b) Industrial and (c) medical/hospital institutions (d) Research and Development

The information, along with statistics collected from individual US states, will form the basis of our assessment as to whether we should continue to pursue the development of this software platform.

Thanks in advance for taking the time to provide this information. I would prefer to receive the information via email at [REDACTED]. For all future correspondence, I am available by phone at [REDACTED] cellular at [REDACTED] 8 or at the above email address.

Kind Regards

Michael Bakes
