Bernie,

Do we know if (and how many) additional ()

Ex 2

Jack.

Bernie:
The following are my lists:

Ex 2

1. SNL definitely need to model the MPC in their () analyses.

2. For a secondary impact between casks resulting from a large airplane impact, SNL need to find out whether or not the first cask will tipover before impacting the second cask from their CTH analysis. My gut feeling is that the first cask will impact the second cask at a () If this is the case () However, SNL need to verify this through their analyses.

Ex 2

Daniel

Please provide me a list before lunch of any calculations that we have asked Sandia to perform and they have been reluctant to for the large plane evaluation. Remember we have the money, but more than anything we want their honest technical opinion.

Thanks
Bernie
