Main Office Inspection
 Field Office Diagnostic Imaging Group, Warren, MI
 Temporary Job Site

Next Inspection Date: Nov. 2007

PROGRAM SCOPE

Licensee had provided nuclear medicine services to a clinic located in Warren, Michigan. Licensee had authorization to use byproduct materials under 10 CFR 35.100, 35.200, and 35.300 at this location. No activities under the NRC license had been performed at this location since September 30, 2004. The clinic had been sold by Diagnostic Imaging Group to Dr. Mohammad Kahn effective October 1, 2004. Licensee was in negotiations regarding whether they would provide nuclear medicine services to the new owner. All licensed sources and records had been removed to safe storage at another facility pending this decision.

Performance Observations

All operations were on hold pending the decision as to whether licensed activities would continue at this location, and no personnel were available who had worked at this facility. The hot lab was secured though no licensed material was present. The facility manager was aware of the previous use of the area, and would contact the licensee with any concerns. Postings were appropriate for the previous use of the area. Surveys indicated no contamination or elevated radiation levels around the facility. Licensee understood that if it was decided that they would not provide nuclear medicine services at this location, they would submit a closeout survey to the NRC.
