Subj: Notification Requirement
NRC License # 39-24888-01

As required by 10 CFR Part 34.101 (c), GE Inspection Services is required to notify the NRC of 180 days of source material usage at a job site not listed on the license. Radiographic operations and storage of material at the following address has exceeded 180 days.

GE Inspection Services
#1 Lexan Lane
Mt. Vernon, In. 47620-9364

A previous request has been submitted requesting the addition of the Mt. Vernon office to our NRC license. Date omitted on the letter should have been 11-11-04 vice 11-04.

Additionally as discussed with the NRC on 11-18-04, there was an omission on our last license application. Whether a typing mistake or license format change, condition 10.A was inadvertently left out of condition 11.B. Please correct and add 10.A to condition 11.B, for temporary job site usage. Also add 6.C to condition 11.B used as shielding material for exposure devices. The above was an oversight not discovered upon initial license review.

Should you have any questions please contact me at:

Work # 843-767-8419
