**Subject: Palo Verde Nuclear Generating Station (PVNGS)
Unit 2
Docket No. STN 50-529
Unit 2, Cycle 12 Startup Report – Supplement 3**

Dear Sirs:

As required by the PVNGS Technical Requirements Manual (TRM), Arizona Public Service Company (APS) is submitting this supplemental report to the PVNGS Unit 2, Cycle 12 Startup Report (Reference 1). TRM T5.0.600.2.c requires that supplemental reports be submitted at least every 3 months until all testing has been completed. At the time that Unit 2, Cycle 12 Startup Report (Reference 1) was initially submitted, two tests had not yet been performed. Those two tests were 1) steam generator moisture carryover and, 2) steam generator blowdown piping vibration measurement. As reported in Reference 2, the remaining portions of the Steady State Vibration Testing for Unit 2 were completed on May 20, 2004. The Steam Generator Moisture Carryover Test remains to be completed. A subsequent report will be provided when this testing is completed.
