Kennecott Uranium Co.
Sweetwater Mill
docket 40-8584

Oscar,
The staff received your response to comments on the catchment basin reclamation plan. However, Table 5-1 (Environmental Monitoring) should have been up-dated to include the revised ground water monitoring, as the table will be referenced in a license condition.

Also, it is not clear that the subsurface soil Th-230 and U-nat will be removed to 15 pCi/g + bkg, if not, cleanup criteria should be justified. Please provide the needed information within 30 days so we can proceed with the licensing action.
