Attn: Mr. Mark Lesser

RE: Response Letter
Recent Vehicle and Nuclear Gauge Theft

Dear Mr. Lesser,

This letter is in response to the requirements set forth in Part 20, Section 20.2201 Reports of Theft or Loss of Licensed Material, (b) Written Reports.

On April 29, 1999 at approximately 4:00 p.m. EST, a technician vehicle along with a Troxler Model 3411-B low level radiation, moisture-density gauge was stolen in Springfield, Virginia. The gauge (serial number 8929) contained CS-137 and AM-241:BE and the activity stored in the device was 7.3 and 40 MCI. The device was marked:

RQ, Radioactive Material
Special Form, N.O.S.
UN 2974
US DOT 7A Type A Package
Class 7, Radioactive Yellow II

The theft occurred when a Triad Engineering technician was parked in front of a job site trailer. As the technician went inside to discuss construction activities with project personnel, a person entered and stole his vehicle. The technician had left his keys in the ignition switch of the vehicle. The project foreman saw the truck being taken and he tried to follow the thief but he was unsuccessful. At that time, the radiation device in question was secured to the truck bed with a lock and chain. The case was locked and the source rod locked in the safe position. Exposure of radiation to the thief was likely minimal to none. On Saturday May 1, 1999, two (2) days after the vehicle and gauge were stolen, they were both recovered by Fairfax County Police on an off ramp of I-95 in Dale City, Virginia. The radiation device was still locked in the bed of the pickup truck and did not appear to have been opened. Triad re-gained possession of the truck and gauge on Monday May 3, 1999 from the Fairfax County Police.

Due to the recent theft, Triad Engineering has issued a company wide key policy. A copy of the new policy is enclosed for your review. Also, our in-house training procedure has included the awareness of maintaining visual contact with our vehicles while we are carrying radioactive material.
