MEMORANDUM TO: José A. Calvo, Chief
Electrical & Instrumentation and Controls Branch
Division of Engineering

FROM: John G. Lamb, Senior Project Manager (*/RA by JGLamb*)
Electrical & Instrumentation and Controls Branch
Division of Engineering

SUBJECT: CLOSEOUT OF ISSUE 24 REGARDING THE ACTION PLAN FOR
RESOLVING ELECTRICAL GRID CONCERNS
(TAC MC3380)

The purpose of this memorandum is to document the closeout of Issue 24 regarding the action plan for resolving electrical grid concerns.

The staff identified 48 grid-related issues from a variety of internal and external sources. The 48 issues are listed in ADAMS Accession No. ML042090490. The issues concerned the power outage event on August 14, 2003, as well as related events. The staff performed both a deterministic and risk assessments of the subject grid issues in order to properly characterize their safety significance and priority for staff action.

The following is a description of Issue 24:

Issue 24 Training of operating personnel needs improvement.

The staff judged Issue 24 to be outside the regulatory authority of the Nuclear Regulatory Commission (NRC). However, the staff stated it would follow the issue to ensure the Federal Energy Regulatory Commission (FERC) staff and/or the North American Electric Reliability Council (NERC) staff addressed Issue 24.

Attachment 1 contains the FERC Order issued on December 27, 2004, requiring a response to a survey on operator training practices by control area operators and transmission providers.

Attachment 2 contains the NERC Standard Authorization Request (SAR) form for a proposed reliability standard regarding "System Personnel Training." The NERC SAR is posted for comment from its members through January 7, 2005.

Based on the FERC and NERC activities, the NRC staff is satisfied that Issue 24 is being addressed; therefore, the staff is closing out Issue 24.

Attachments: 1. FERC Order
2. NERC Standard Authorization Request Form
