

NUCLEAR REGULATORY COMMISSION
DOCKET NO. 030-31689
January 25, 2005

Environmental Assessment Related to an Amendment
of U.S. Nuclear Regulatory Commission Materials License No. 19-07538-05,
Issued to the Department of Health and Human Services

The U.S. Nuclear Regulatory Commission (NRC) is considering amending Materials License Number 19-07538-05 and authorizing the release of the licensee's facilities in Kensington, Maryland, for unrestricted use and has prepared an Environmental Assessment (EA) in support of this action.

SUMMARY: The NRC reviewed the results of the decommissioning of the Department of Health and Human Services facility in Kensington, Maryland. The Department of Health and Human Services was authorized by NRC initially in May 1990 to use radioactive materials for research and development purposes at the Food and Drug Administration (FDA) Center for Drug Evaluation and Research site. In 2003, the Department of Health and Human Services ceased operations with licensed materials at the Kensington, Maryland site, and requested that NRC release the facility for unrestricted use. The Department of Health and Human Services has conducted surveys of the facility and determined that the facility meets the license termination criteria in Subpart E of 10 CFR Part 20. The NRC staff has evaluated the Department of Health and Human Services request and the results of the surveys, and has developed an EA in accordance with the requirements of 10 CFR Part 51. The NRC has determined that a Finding of No Significant Impact (FONSI) is appropriate for the proposed action.

Introduction

The Department of Health and Human Services requested release for unrestricted use of the building at 5516 Nicholson Lane, Kensington, Maryland as authorized by the NRC License No. 19-07538-05. The building has four laboratories where radioactive materials were used totaling approximately 500 square feet. The building is located in an industrial/commercial area.

License No. 19-07538-05 was issued in 1990 and amended periodically since that time. NRC-licensed activities performed at the Kensington, Maryland site were limited to laboratory procedures typically performed on bench tops and in hoods using tritium and carbon-14. No outdoor areas were affected by the use of licensed materials.

Licensed activities ceased at the Kensington, Maryland facility completely in June 2004 and the licensee requested release of the facility for unrestricted use. Based on the licensee's historical knowledge of the site and the conditions of the facility, the licensee determined that only routine decontamination activities, in accordance with licensee radiation safety procedures, were required. A decommissioning plan was not required to be submitted to the NRC. The licensee surveyed the facility, decontaminated or remediated areas as needed, and provided documentation that the facility meets the license termination criteria specified in Subpart E of 10 CFR Part 20, and does not require additional decommissioning activities to be performed.

Department of Health and Human Services
Environmental Assessment

The licensee demonstrated this using the screening criteria described in 65 FR 37186. The licensee subsequently requested that the facility be released for unrestricted use.

The Proposed Action

The proposed action is to amend Materials License No. 19-07538-05 and release the facility at 5516 Nicholson Lane, Kensington, Maryland for unrestricted use. By letter dated September 21, 2004, the Department of Health and Human Services stated that no further actions are required to remediate the facility and provided survey results which demonstrate that the Kensington, Maryland facility is in compliance with the radiological criteria for license termination in Subpart E, 10 CFR Part 20, "Radiological Criteria for License Termination."

Purpose and Need for the Proposed Action

The purpose of the proposed action is to amend NRC Materials License No. 19-07538-05, to allow for the release of 5516 Nicholson Lane, Kensington, Maryland, for unrestricted use. The licensee needs this license change because it no longer plans to conduct licensed activities at this facility. NRC is fulfilling its responsibilities under the Atomic Energy Act to make a timely decision on a proposed license amendment for release of facilities for unrestricted use that ensures protection of public health and safety and the environment. The licensee has requested the action to reduce their regulatory burden since they no longer intend to conduct licensed activities at this location.

Environmental Impacts of the Proposed Action

The affected environment was described in the Introduction. The licensee has completed all remediation at the site. The NRC staff has reviewed the surveys performed by the Department of Health and Human Services to demonstrate compliance with the 10 CFR 20.1402 license termination criteria. Based on its review, the staff has determined that the affected environment and environmental impacts associated with the release for unrestricted use of the Department of Health and Human Services facilities are bounded by the impacts evaluated by the "Generic Environmental Impact Statement in Support of Rulemaking on Radiological Criteria for License Termination of NRC-Licensed Nuclear Facilities" (NUREG-1496). The staff also finds that the proposed release for unrestricted use of the Department of Health and Human Services facilities is in compliance with Title 10, Code of Federal Regulations, Part 20.1402, "Radiological Criteria for Unrestricted Use." The NRC has found no other activities in the area that could result in cumulative impacts.

Environmental Impacts of the Alternatives to the Proposed Action

Since the facility at the Kensington, Maryland site has already been surveyed and found acceptable for release for unrestricted use, the only alternative to the proposed action of amendment of the license and release of the Kensington, Maryland site for unrestricted use is no-action. The no-action alternative is not acceptable because the licensee does not plan to perform any activities with licensed materials at these locations and does not plan to maintain

Department of Health and Human Services
Environmental Assessment

staff to perform licensed activities. Maintaining the areas under a license would impose an unnecessary regulatory burden. The effect of the no-action alternative would be to restrict potential benefits from future uses of the site.

Agencies and Persons Consulted

The NRC staff has determined that the proposed action will not affect listed species or critical habitat. Therefore, no further consultation is required under Section 7 of the Endangered Species Act. Likewise, the NRC staff have determined that the proposed action is not the type of activity that has the potential to cause effects on historic properties. Therefore, no further consultation is required under Section 106 of the National Historic Preservation Act.

NRC provided a draft of its Environmental Assessment to the Maryland Department of the Environment for review. On January 19, 2005, the Maryland Department of the Environment responded by electronic mail and agreed with the conclusions of the EA.

Conclusions

Based on its review, the NRC staff has concluded that the completed action complies with 10 CFR Part 20. The NRC staff have prepared this EA in support of the proposed action to amend License No. 19-07538-05. On the basis of the EA, NRC has concluded that there are no significant environmental impacts and the license amendment does not warrant the preparation of an Environmental Impact Statement. Accordingly, it has been determined that a Finding of No Significant Impact is appropriate.
